## INSTRUCTIONS for USING this BOOK

GENERAL INDEX to ALL subjects appears on Pages 3 to 6.

GENERAL INSTRUCTIONS applying to ALL MODELS appear on Pages 7 to 16. These instructions cover adjustments, threading, needle sizes, etc. covering all models.

ADDITIONAL INSTRUCTIONS for EACH MODEL appear on Pages 17 to 31. These instructions cover the special features of each model which do not apply to other models. See INDEX (Page 3) for each model.

### HOW TO ORDER PARTS

For your convenience in finding parts and part numbers, we have broken down the machine into its various component groups (such as main shaft group, presser foot group, needle drive group). Pictures of these groups are shown in PLATES numbered from A to 33. The Plates are listed in the Index (Pages 4 and 5) with a description of the Group and the model numbers of the machines in which these groups are used.

All the groups used in each model are also listed under the Model heading (See Index Page 3 for each model).

The CROSS-REFERENCE CHART on Pages 33, 34, and 35 show the Groups and the various models in which each group is used.

To find any part number, first refer to the Model number and Serial number stamped into the top cover of each machine. Determine the group in which each part belongs, find the Plate for this group, and locate the part and its number. The descriptions of the parts are on the page opposite each Plate.

If the part number is known, refer to the Numerical Index (Pages 105-108) to locate all of the Plates of Groups where the part is used.

ORDER by PART NUMBER, giving DESCRIPTION, QUANTITY, MODEL number and SERIAL number of the machine.

NOTE: IN ALL CASES, PLEASE SUFFIX THE NUMBER SIGN (#) TO THE PART NUMBER:  
EXAMPLE: 23 C 281#. PART NUMBER ON YOUR ORDER IS NOT COMPLETE  
WITHOUT THE # SIGN FOLLOWING THE PART NUMBER.

INSTRUCTIONS FOR THE INSTALLATION,  
ADJUSTING AND OPERATION OF ALL  
COLUMBIA CLASS 300 MACHINES.

UNPACKING AND SETTING UP OF MACHINE

1. To remove the machine from the box, take off the cover. Use a nail puller to avoid breaking the machine. Be sure to look carefully through the material used for packing before destroying it, so that all the parts and equipment that go with the machine will be found. Lift the machine out of the box very carefully to avoid breaking the tension studs, as these parts project beyond the head of the machine. Small parts will be found wrapped in a package.
2. Set up the machine; clean away accumulated lint and dust, especially from the looper.
3. Place the machine on the bench with the pulley lined up with the transmitter. The machine should be set on the table so that the knee lever is  $1/2''$  from the edge of the table.
4. Mark the two holes for the machine screws and bore for the screw holes; bore the hole for the belt; place the felt pad under the machine and fasten the machine to the table, using the two machine bolts in the package of parts shipped with the machine.
5. The machine may be run 3000 revolutions per minute; it is suggested, however, that the machine first be operated at about 2500 revolutions per minute until the operator becomes used to the machine, and then step up the machine to increase the speed.
6. We reserve the right to change specifications or designs at any time, without incurring the obligation to install such changes on machines previously manufactured.

HAND WHEEL

7. The hand wheel turns away from the operator in clockwise direction.

OPERATING THE MACHINE

OILING

8. Before starting the machine make certain that all oil cups, and all openings marked with red paint, are filled with oil. Should your machine have a Top Plate stamped "OIL" push the plate to one side, oil all the openings, reset and lock the plate.

SPEED

9. Check the speed of the machine. The machine should run at a minimum speed of 2500 revolutions per minute, and should not exceed 3000 revolutions per minute.
10. To be certain that there are no obstructions in and around the machine, press the knee-lifter to the right, turn pulley by hand in the direction of the arrow a complete turn.

## GENERAL INSTRUCTIONS

### THREADING

11. To thread the machine turn the belt pulley by hand until the needle arm is in its highest possible position. Proceed as shown in Threading Chart Page 12B. We suggest #00 mercerized thread.

### INSERTING WORK

12. To insert work in the machine, press the knee lifter to the right. (This lowers the Apron.) Then place the folded edge or sewed edge of the garment **DIRECTLY UNDER** the small curved slot in the gauge on top of the presser foot. Once this is done, the rest of the fold should be held against the guide extending in front of the presser foot. In operating the machine, just watch this guide (not the needle).

### ADJUSTING NEEDLE PENETRATION

13. Run off a few test inches and inspect the work. If the needle does not catch the fabric as desired, adjust the penetration by turning the dial indicator marked "MORE" or "LESS", following the instructions below:

14. Turn this dial indicator either to the right for less penetration, or to the left for more penetration, until the needle catches the bottom layer of the garment properly.

15. Usually it is sufficient to move the dial indicator a few graduations (**NOT** turns) to the left, to obtain the desired stitch, however, should you move the dial indicator a few graduations and get no results, then look for trouble at the point of the needle, which, very likely, will have been turned up to a feather-edge, causing a dull point that prevents the needle from penetrating the fabric properly. Pass your finger over the edge to see if the needle has this feather-edge. If it does, discard the needle.

### NEEDLE REPLACEMENT

16. Before inserting the new needle, turn the dial to the right, ("LESS") until the rib, or plunger, remains clear of the needle, or else the needle will get a defective point again as soon as the machine is started.

17. When replacing the needle, make sure that it is pushed up as far as it will go, and tighten the screw. Then turn the belt pulley slowly and look to see that the full bend of the needle in back of the eye, rides on the needle guide before the needle enters the work. If it does not, take the needle out and curve it just enough to make it rest on the guide, under a slight tension.

### STARTING TO SEW

18. You are now ready to proceed with the production. Press the knee-lifter to the right; insert the work as explained above, release the knee-lifter, and guide the work as the machine pulls it from you.

## GENERAL INSTRUCTIONS

DO NOT touch the knee-lifter while the machine is in operation.

### LOOP SKIPS

19. In case the thread breaks too frequently, or the loop skips, or the fabric gathers, correct this fault by adjusting the tension disc by turning the nut either right or left until you get a smooth line.

### REMOVING WORK

20. To remove the work after stitching, see that the needle is withdrawn entirely from the fabric, push the knee-lifter to the right, and remove work with a quick pull away from you, in order to break the thread and lock the stitch.

### NEEDLE SIZES

21. Needles are furnished in the following sizes, order by size number.

<u>NO.</u>	<u>NO.</u>
1	3½
2	4
2½	4½

Ordinarily, sizes 2½ and 3½ needles will serve the purpose. A full range of needle sizes are, however, available to meet all requirements.

22. Use ONLY genuine COLUMBIA needles. Look for the copyrighted word Columbia printed on each box of needles.

### THREAD

23. Use any good grade of left-twist three cord hard finish cotton thread in sizes 70 to 100. We recommend No. 00 Mercerized thread or its equivalent. If silk thread is used, select either "00" or "000".

### REGULATOR FOR DEPTH OF NEEDLE PENETRATION

24. The needle penetration adjustment is located on the front of the arm column of the machine, and is a dial that has graduations, show the word "MORE" which indicates the direction in which to turn the dial lever for a deeper needle penetration; and the word "LESS" which indicates the direction to turn the dial lever to obtain less needle penetration in the work. (See work apron adjustments for setting regulator).

### TIMING

25. All basic driving parts are properly timed with spot screws.

# ADJUSTING & TIMING CHART COLUMBIA CLASS 300 MACHINES

FIG. 2

FIG. 5

FIG. 4

FIG. 3

ADJUSTING CHART

## GENERAL INSTRUCTIONS

PRESSER FOOT

26. The presser foot must be mounted on the machine with care. It is clamped to the head of the machine by a screw under the head, and with two screws on the end of the head, that clamps the foot bridge to the machine. The screw between the bridge screw is eccentric, and is for adjusting the foot up or down.

27. To mount the presser foot, assemble with the four screws. Let the two bridge screws hold the foot loosely, and tighten the clamp screw under the head. Now using the eccentric screw, adjust the foot as follows:

28. With a new  $3\frac{1}{2}$  size needle in the needle arm, rotate the hand wheel in clockwise direction until the point of the needle is over the needle guide. Turn the eccentric screw and adjust the foot up or down until the needle just contacts the needle guide, and tighten the bridge screws. Back up the needle until the point of the needle is in looper opening; there should be a maximum of .005 between the needle and bottom of the needle groove on the left hand side of the presser foot. Rotate the hand wheel in clockwise direction until the point of the needle is  $\frac{5}{8}$ " to  $\frac{11}{16}$ " from the right hand side of the cloth opening. At this position there should be from .001" to .003" clearance from the bottom of the needle groove to the needle.

29. Re-check the needle clearance on the right and left hand side of the presser foot and if not correct, loosen the two bridge screws, and twist the foot by hand to obtain the correct needle clearance, and tighten screws making sure that the needle is in light contact with the needle guide.

ADJUSTING NEEDLE STROKE

30. Rotate hand wheel in clockwise direction until needle carrier is on extreme left hand end of needle stroke, insert and clamp a  $3\frac{1}{2}$  size needle into the needle arm. Rotate hand wheel until the point of the needle is even with the left hand side of the looper opening in the presser foot, this setting is made by loosening the needle arm set screw and slipping the needle arm so that the point of the needle is even with the looper opening. The rear side of the needle must clear the needle groove .005".

31. Continue to rotate hand wheel until the needle is at the end of needle stroke on the right hand side, see figure 5; at this position the point of the needle must be from  $\frac{5}{8}$ " to  $\frac{11}{16}$ " from the right hand side of the cloth opening on the presser foot. This setting is made by loosening the clamp screw holding the needle ball in the needle shaft crank, and turning the eccentric ball until the point of the needle is set correctly. See figures 2 and 5, adjustment 4 and 5.

32. The needle must be in contact with the needle guide when the needle point is from  $\frac{1}{64}$ " to  $\frac{1}{32}$ " from the left hand side of the cloth opening in the presser foot, Figure 6.

WORK APRON

33. Adjust work apron so that left hand feed platten is flush with left hand side of cloth opening in presser foot. The adjustment is made by loosening two hexagon set screws in up right arm of the machine base, under the work apron holding the work apron shaft; slide the apron in correct position, and tighten the two set screws, Adjustment 9, Figure 5.

## GENERAL INSTRUCTIONS

34. Set needle over highest part of rib, and adjust work apron to raise needle from the needle guide  $1/64''$ . The adjustment is made with the work apron stop screw. Adjustment 13, Figure 5. When set tighten lock nut.

35. Now set regulator for depth of needle penetration with needle over the rib, and work apron set so that the needle is raised  $1/64''$  above needle guide. Set dial knob so that pointer is against stop pin at 12 on the dial. To make the setting loosen two set screws in the dial knob and turn the pointer to come in contact with the left hand side of the stop pin and tighten the set screw. See Adjustment 8, Figure 4.

36. The above adjustment must be carefully made as it limits the height the rib can be raised and will avoid blunting needle points.

37. For General sewing the pointer will usually be about No. 9 on the dial.

### FEED PLATTEN

38. Set feed platten, figure 5, so that they will depress  $1/32''$  when in contact with the bottom of presser foot, after adjustment of foot and apron has been made. The setting is made by adjusting the feed platten carrier adjusting screws, and tighten lock nuts.

### FEED

39. To set depth of feed, figure 6, adjustment 5, first turn hand wheel until needle point when approaching from the left is flush with left hand side of cloth opening in presser foot. Loosen the two feed clamp screws, and set feed so that a  $.003''$  shim or newspaper will just be clamped between the top of feed plate, and the bottom of the presser foot. The feed points must be parallel with bottom of foot, tighten the feed clamp screws, and check clearance between feed and looper at all positions.

### LENGTH OF STITCH

40. The length of stitch is adjustable from 3 stitches per inch to 8 stitches per inch, by turning a numbered regulator on the main shaft in the rear of the head. See figure 7, adjustment 6, and chart on page 12A.

41. To make the adjustment, remove the rear head cover and loosen the regulator clamp screw, insert a screw driver in a slot in the regulator, hold firmly and turn the hand wheel so the number desired is opposite the notch milled into the flange beside the regulator, and tighten the clamp screw of regulator.

42. As the depth that the feed is set below the presser foot affects the length of stitches, the numbers on the feed regulator do not indicate the stitches per inch. Setting the regulator on number 9 will equal about 3 stitches per inch, and setting regulator on number 5 will equal about 8 stitches per inch.

### THE RIB

43. The function of the Rib is to present the work into the path of the needle, and is adjustable relative to the needle by turning the regulator dial lever "MORE" or "LESS" for depth of needle penetration.

**TO ADJUST THE LENGTH OF STITCH:**

- 1 -- Remove rear cover.
- 2 -- Loosen screw on stitch-adjusting ring.
- 3 -- Find notch on cam by turning hand pulley, then stop.
- 4 -- Insert screw driver in any slot on the stitch-adjusting ring and press down from the notch on the cam for a short stitch.
- 5 -- Tighten screw, then try the stitch.
- 6 -- To select the proper length repeat the operation.
- 7 -- For best results move the stitch-adjusting ring the amount as indicated and tighten when stamped number is in line with the notch on the cam.

VIEW FROM REAR OF MACHINE

COVER REMOVED

THREADING CHART  
COLUMBIA CLASS 300 MACHINES

## GENERAL INSTRUCTIONS

44. The Rib must be set to be  $3/32''$  from the right hand side of the cloth opening in the presser foot. The adjustment is made by loosening the clamp screws of the Collars on each end of the rib shaft, see adjustment 10 and 11, figure 5. Set the rib in center of the cloth opening and tighten clamp screws. There must be no end play in the rib shaft.

45. If the machine is a 1-to-1 machine that is, the needle penetrates the body fabric of the garment on every stitch, the rib must be set so that when the needle point is over the center of the rib, the needle point is  $3/32''$  back from the nose of the rib. The adjustment is made as follows:

46; Rotate hand wheel in clockwise direction until rib is at extreme end of its stroke with nose of rib under the needle. Loosen clamp screw in crank, adjustment 14, figure 5, and set rib by hand so that point of needle is  $3/32''$  back from nose of rib, and tighten clamp screw.

### LOOPER

47. The correct setting of the looper is of greatest importance. Refer to "Adjusting and Timing Chart", Page 10. The looper carrier assembly consists of:

Looper Yoke - in which are the looper yoke pin holes.

Clamp Screw.

Looper Ball.

Looper Carrier

48. The looper carrier and looper yoke are set before assembling these parts into the machine. Now, the looper ball is positively located on the shaft of the looper carrier by a spot screw. The looper carrier is assembled to the looper yoke, so that the distance from the edge of the looper yoke pin nearest the looper ball, to the side of the looper ball nearest the looper yoke will be 4 to  $4-1/32$  (See Adjusting Chart, Figure 1, Adjustment 2.) The looper hole must be in line with center of looper carrier as shown in Figure 1.

49. The looper is mounted in the looper carrier assembly; allow  $1/64''$  space between looper shoulder and end of looper carrier. (See Figure 2, Adjustment 1.) The Correct assembling of this unit must be understood in case for any reason it is necessary to remove or replace this assembly.

50. The looper has means for the following adjustments, which, for reference to the drawing, are numbered as follows:

#### Adjustment 1

51. Means for adjusting the looper in and out.

#### Adjustment 2

52. Means for adjusting the looper position on the right hand side, or when the looper is taking the loop from the needle.

## GENERAL INSTRUCTIONS

Adjustment 3

53. Means for adjusting the looper position on the left hand side, or when the needle is between the prongs of the looper.

54. Means for adjusting the position of the looper from left to right, or right to left.

55. Before setting the looper, the looper carrier assembly must be in accordance with instructions for Figure 1, and Figure 2, and the needle setting must be as described in adjustments 4 and 5, Figures 2 and 5.

ADJUSTING AND SETTING THE LOOPER

56. To secure the correct adjustment of the looper, the following steps should be taken and in the same sequence as here given:

57. The looper is first adjusted as the looper is taking the loop from the needle.

58. The position for the long prong of the looper is to have the point of this prong  $1/16''$  to  $3/32''$  from the inner end of the needle eye, and the point of the long prong should brush the scarf of the needle slightly.

59. To secure this setting, the following steps and adjustments are taken and made:

60. Turn the hand wheel in clockwise direction; that is, the top of the hand wheel will be moved away from the operator very slowly until the long prong of the looper is over the center line of the needle.

61. Loosen the looper ball joint shaft eccentric bushing set screw, this will allow the bushing to slide either to the right or left, and to rotate so that the looper can be adjusted up or down, and at the same time the looper can be moved to the right or left. (See Figure 3, Adjustment 3.) that shows that the approximate setting of the eccentric bushing is with the looper shaft hole toward the needle end of the head, and the adjusting slot at an angle, and the slit into the shaft hole near the bottom.

62. Slide the bushing until the long prong of the looper is  $3/32''$  from the inner end of the needle eye, and tighten bushing set screw.

63. Loosen the looper yoke clamp screw, see Adjustment 2, Figure 2, and roll the looper until the long prong of the looper just brushes the scarf of the needle.

## GENERAL INSTRUCTIONS

64. Check to see that point of the long prong of the looper just brushes the scarf of the needle, and is  $3/32''$  from the inner end of the needle eye. See Figure 5.

65. Continue to rotate hand wheel in clockwise direction, until the short prong of the looper is at nearest point when passing chaining finger, not exceeding  $1/32''$  - See Figure 6. If the short prong does not clear the chaining finger, or if the clearance is greater than  $1/32''$ , then the previous adjustments have not been correctly made, and these should be re-made.

66. Continue to rotate the hand wheel in clockwise direction until the short prong of the looper has passed the edge of the looper slot in the foot. If the short prong of the looper does not enter the looper slot in the foot, adjust so that the short prong will clear the edge of the looper slot in the foot by moving the eccentric bushing for the looper, Adjustment 3, Figure 3. Move the bushing the least amount possible so that the short prong clears the edge of the looper slot.

67. Care must be taken now as the needle may strike the crotch of the looper when the needle should be entering between the prongs of the looper.

68. Continue to turn the hand wheel in clockwise direction until the point of the needle should enter between the prongs, but instead of doing so, strikes the crotch of the looper. The following corrective steps are required:

69. The needle must enter between the prongs of the looper, clearing the two prongs about an equal amount.

70. In case the needle should not enter about midway of the two prongs to correct this, loosen the eccentric bushing clamp screw, Figure 3, and turn the looper eccentric bushing in Adjustment 3, Figure 3, until the prongs of the looper are about equal distance from the needle. When this setting has been made, tighten the bushing set screw. See Figure 3.

71. Continue to rotate the hand wheel in a clockwise direction until the point of the long prong of the looper is over the center line of the needle. Check to see that the point of the long prong of the looper is  $1/16''$  to  $3/32''$  from the inner end of eye of the needle, and that the point of the long prong just brushes the scarf of the needle. In case the above conditions do not exist, the eye must be corrected -- this is done as described in the 56 to 65 paragraphs inclusive under the heading "ADJUSTING AND SETTING THE LOOPER". Be sure to roll the looper - Adjustment 2, Figure 2. Do not turn the looper eccentric bushing.

72. The machine, as far as the looper and needle are concerned is now ready to sew. Different materials or different threads may cause a slightly variation from the above adjustments, however, these adjustments will give the best results when padding or hemming the more heavy materials. When hemming silks and cotton, however, it may be advisable to set the point of the needle  $1/16''$  - Figure 6, instead of  $3/32''$ , without changing the looper position by re-adjusting the needle ball stud, Adjustment 4, Figure 2.

## GENERAL INSTRUCTIONS

RETAINER OR CLOTH CLAMP

73. The cloth retainer located in the cloth opening of the presser foot must at all times be adjusted as close to the needles as possible, and set relative to the ridge forming disc to firmly hold the work onto the disc while the needle is penetrating the material. If the work is carried along with the needle, no loop will form, resulting in missed stitches. See Figure 6, Adjustment 7. To adjust the retainer loosen set screw in foot and turn the cloth retainer eccentric bushing and turn bushing for setting retainer to the needle, and slide to the right or left for setting retainer to the rib, and tighten set screw in the presser foot.

COLUMBIA MODEL 300-5 - GENERAL UTILITY  
MACHINE

THE MODEL 300-5

The Model 300-5 is a general utility Blind Stitch machine for general alteration work, and for felling trouser bottoms, bottom of coats, dress hems, etc.

It is an excellent machine for alteration rooms, manufacturers, and for cleaners and dyers.

This model is equipped to sew the base layer or body fabric on every stitch, and is equipped with a work plate for sewing flat work, and the work plate can be swung out of the way for sewing cylindrical work such as pants bottoms and sleeves.

The machine is equipped with a knee lift.

INSTRUCTIONS FOR ORDERING PARTS

The parts have been broken up into groups, and these groups are shown below. Turn to the plate showing the group in which the part to be ordered is located, find the part, and order by part number. Part number on your order is incomplete without the # sign following the part number. Following is list of plates and groups.

<u>PLATE</u>	<u>PAGE</u>	<u>DESCRIPTION OF GROUP</u>
A	36	Sundry Parts - Head and Arm.
1	38	Main Shaft Group.
4	44	Looper Drive Group.
5	46	Needle Drive Group.
6	48	"Clock Dial" Stitch Depth Adjustment Group.
8	52	Presser Foot Group.
15	66	Work Table and Knee Lift Group.
16	68	Work Apron Group.
17	70	Feed Platten Group.
24	84	Rib Shaft Group.
26	88	Feed Points.

## COLUMBIA MODEL 300-5

ADDITIONAL ADJUSTMENTS FOR MODEL 300-5

Refer to timing chart, page 10.

STITCH LENGTH

Generally set 3 stitches per inch, #9 on stitch regulator, Adjustment 6, Figure 7.

RIB

Set rib in center of cloth opening in the presser foot, Adjustment 9, Figure 5.

CLOTH RETAINER

Rotate hand wheel clockwise until the rib is at the end of its oscillation, and under the needle. Adjust the cloth retainer to just clear the needle, and center the cloth retainer to the rib. To check this setting, insert a strip of paper on each side of the rib, under the retainer; the retainer must clamp both strips of the paper. See Adjustment 7, Figure 6.

## COLUMBIA MODEL 300-10 - ROLLED EDGE MACHINE

THE MODEL 300-10

Model 300-10 is a machine specially made for rolled edges or hand rolled hems.

Folders are available in sizes #00, #1, #2 and #3, for producing a rolled edge on the lighter materials, such as used in making scarfs, and for heavier materials, such as light worsteds.

The Model 300-10 is used in making:

Scarfs	Slips	Handkerchiefs
Dresses	Housecoats	Table Cloths
Evening Gowns	Play Suits	Napkins, etc.

INSTRUCTIONS FOR ORDERING PARTS

The parts have been broken up into groups, and these groups are shown below. Turn to plate showing the group in which the part to be ordered is located, find the part, and order by part number. Part number on your order is incomplete without the # sign following the part number. Following is list of plates and groups.

<u>PLATE</u>	<u>PAGE</u>	<u>DESCRIPTION OF GROUP</u>
A	36	Sundry Parts - Head and Arm.
1	38	Main Shaft Group.
4	44	Looper Drive Group.
5	46	Needle Drive Group.
6	48	"Clock Dial" Stitch Depth Adjustment Group.

## COLUMBIA MODEL 300-10

<u>PLATE</u>	<u>PAGE</u>	<u>DESCRIPTION</u>
13	62	Presser Foot Group.
16	68	Work Apron Group.
18	72	Feed Platten Group.
21	78	Knee Lift Group.
22	80	Folders.
24	84	Rib Shaft Group.
26	88	Feed Points.

ADDITIONAL ADJUSTMENTS FOR MODEL 300-10

Refer to timing chart, page 10.

STITCH LENGTH

Set for 6 stitches per inch, #5 on feed regulator, Adjustment 6, Figure 7.

RIB

Set rib .093 (3/32") from right hand side of cloth opening in presser foot, Adjustment 10 and 11, Figure 5.

CLOTH RETAINER

Set cloth spring retainer as close to the needle as possible with right hand side of retainer even with right side of rib.

FEED

Rotate hand wheel in clockwise direction until end of feed is nearest to the needle. Set end of feed 3/64" from back side of needle.

Set depth of feed 1/32" below, and parallel with bottom of the foot.

FEED PLATTEN

Set left hand side of slot in feed platten 1/64" from the left hand side of cloth opening in the presser foot. Adjustment 9, Figure 5.

NEEDLE STROKE

Rotate hand wheel in clockwise direction until the needle arm is at the end of its left hand stroke, insert needle in the needle arm, and clamp. Loosen clamp screw of needle arm, and set the point of needle even with the left hand side of looper opening in the presser foot, and tighten clamp screw, Adjustment 5, Figure 5.

## COLUMBIA MODEL 300-10

Continue to rotate hand wheel in clockwise direction so that needle is at the extreme right hand end of its stroke. The point of the needle when in this position should be from  $11/16''$  to  $3/4''$  from the right hand side of the cloth opening in the presser foot, check, and if not correct, reset by using eccentric ball stud. Adjustment 4, Figure 2.

#00 FOLDER

When roll edging with #00 folders, the rib must be set  $.047$  ( $3/64''$ ) from the right hand side of the cloth opening in the presser foot.

Set stitch length for 8 stitches per inch, #4 on feed regulator. Adjustment 6, Figure 7.

## COLUMBIA MODEL 300-11 - PANTS BOTTOM MACHINE

THE MODEL 300-11

Model 300-11 is specially fitted for felling pants bottoms. It is equipped with a cylinder end cover for handling the pants leg. The edge guides furnished with the machine can be quickly set to make the turn up the desired depth.

The length of stitch is adjustable, and the machine is equipped with a knee lift.

As the machine is intended to sew cylindrical work only, it is not equipped with a work plate.

INSTRUCTIONS FOR ORDERING PARTS

The parts have been broken up into groups, and these groups are shown below. Turn to plate showing the group in which the part to be ordered is located, find the part, and order by part number. Part number on your order is incomplete without the # sign following the part number. Following is list of plates and groups.

<u>PLATE</u>	<u>PAGE</u>	<u>DESCRIPTION OF GROUP</u>
A	36	Sundry Parts - Head and Arm.
1	38	Main Shaft Group.

17	70	Feed Platten Group.
21	78	Knee Lift Group.
24	84	Rib Shaft Group.
26	88	Feed Points.

## COLUMBIA MODEL 300-11

ADDITIONAL ADJUSTMENTS FOR MODEL 300-11

Refer to timing chart, page 10.

STITCH LENGTH

Set machine to sew 6 stitches per inch. (No. 5 on feed regulator). Adjustment 6, Figure 7.

RIB

Set rib .045 (3/64") from right hand side of rib to left hand side of cloth opening in the presser foot, Adjustment 10 and 11, Figure 5.

## COLUMBIA MODEL 300-12 - FACING - TACKING MACHINE

THE MODEL 300-12

Model 300-12 tacks the facing of women's coats any distance from the edge with a flexible stitch that tacks the facing to the fore part of the coat, holding the garment in shape, and keeps the coat from sagging.

The machine is furnished with a large work plate, and is equipped with a knee lift.

INSTRUCTIONS FOR ORDERING PARTS

The parts have been broken up into groups, and these groups are shown below. Turn to plate showing the group in which the part to be ordered is located, find the part, and order by part number. Part number on your order is incomplete without the # sign following the part number. Following is list of plates and groups.

<u>PLATE</u>	<u>PAGE</u>	<u>DESCRIPTION OF GROUP</u>

28	92	Feed Platten Group.
29	94	Left Hand Rib Drive Group.
30	96	Left Hand Rib Adjustment Group.
31	98	Work Apron Group, Two Rib Machines.
32	100	Work Support Group.
33	102	Work Support Bracket Group.

## COLUMBIA MODEL 300-12

ADDITIONAL ADJUSTMENTS FOR MODEL 300-12

Refer to timing chart, page 10.

STITCH LENGTH

Set machine to sew 3 stitches per inch, #9 on feed regulator. Adjustment 6, Figure 7.

PRESSER FOOT

See General Instructions for all Models.

NEEDLE STROKE

Set point of needle when at right hand end of stroke,  $5/8''$  to  $21/32''$  from right hand side of cloth opening to the point of the needle, otherwise the same as in General Instructions for all Models. Adjustment 5, Figure 5.

LOOPER ADJUSTMENT

Looper adjustments are the same as in General Instructions for all Models.

RIBS

There are two ribs in the Model 300-12 machine. The left hand rib raises the body fabric to the needle, and penetration is regulated by the dial knob on the lower part of the apron.

The right hand rib raises the folded facing, including the body fabric (3 ply of material) to the needle, and penetration is regulated by dial knob on the arm.

SET RIGHT HAND RIB

Set position of right hand rib  $.089''$  ( $3/32''$ ) from right hand side of rib, to right hand side of cloth opening in the presser foot. The setting is made by loosening the two work apron shafts set screws. Adjustment 9, Figure 5, and sliding the work apron until the rib is in correct position.

Set height of right hand rib as follows: First, loosen two set screws in dial knob on arm, Adjustment 8, Figure 4. Set pointer, or hand on top of the stop pin, and tighten one set screw. The knob with pointer can now be turned without the pointer striking the stop pin.

Turn the dial knob in "LESS" direction until the adjustment rod, Adjustment 12, Figure 5, leaves contact with the apron. Turn the hand wheel until the needle point is directly over the right hand rib, remove cover on top of the apron and loosen rib connecting rod clamp screw, Adjustment 14, Figure 5, and rotate right hand rib so that the point of the

## COLUMBIA MODEL 300-12

needle is  $1/32$ " back of the radius on nose of the rib, and tighten clamp screw. Now, with the needle point directly over the right hand rib, set height so that rib will lift needle .005" from the needle guide by using the apron stop screw, Adjustment 13, Figure 5, tighten lock nut.

Place three thicknesses of sack coat material under the presser foot, and reset the dial regulator on the arm by turning the dial knob in "LESS" direction until one or two strands of the top material is picked up by the needle to produce a blind stitch. When this condition has been achieved, loosen the dial knob set screw, and reset the indicator point to #9 on the dial, and tighten the two dial knob set screws, Adjustment 8, Figure 4.

SET LEFT HAND RIB

Lower left hand rib by turning the dial knob on work apron bracket in "LESS" direction to the lowest position.

Turn hand wheel in clockwise direction until the left hand rib is in its most advanced position, with needle point directly over the rib; now turn the arm dial knob in "LESS" direction until the indicator pointer strikes the stop pin on dial lowering the work apron.

Now, by turning the graduated dial knob above the apron in "MORE" direction, raise the left hand rib until it lifts the needle .005" from the needle guide, and set stop screw for the work apron bracket.

The stop screw, #18-756, is in the right hand arm under the work apron bracket, see plate 30, page 96. First, remove the lock screw, CS320 1/2 on top of the stop screw, and adjust stop screw as above, and replace lock screw.

Turn arm dial knob in "MORE" direction until indicator point is at #9 and with indicator in this position, and by turning the dial knob indicator on work apron in "MORE" direction, raise the left hand rib to blind stitch a single thickness of medium weight sack coat material.

Now set left hand rib so that the needle point is  $1/32$ " in back of the radius on the nose of the left hand rib when at the most forward end of its stroke, and under the needle point. Loosen clamp screw 18-710 in left hand rib crank, 448-133, set rib and tighten clamp screw. See plate 29, page 94.

FEED

Set length of stitch with feed regulator on  $7 \frac{1}{2}$ , Adjustment 6, Figure 7. Turn hand wheel in clockwise direction until feed is on end of stroke nearest the needle. Loosen the two feed screws, and set end of feed from  $1/8$ " to  $3/16$ " back of needle. The depth of feed is set by turning hand wheel in clockwise direction, and set feed so that when needle point is  $1/64$ " to the left of cloth opening in the presser foot, the left hand feed platten will clamp a .003" shim or a piece of newspaper.

## COLUMBIA MODEL 300-14 R

## PADDING MACHINE

THE MODEL 300-14 R

Model 300-14 R is fitted for padding collar and lapels, and felling bridles.

Presser Feet are available for padding from the lighter to the heavy weight materials.

The machine is equipped with a foot treadle or knee lifter.

As the machine is intended for padding work, a work plate is not furnished with this model.

#### INSTRUCTIONS FOR ORDERING PARTS

The parts have been broken up into groups, and these groups are shown below. Turn to plate showing the group in which the part to be ordered is located, find the part, and order by part number. Part number on your order is incomplete without the # sign following the part number. Following is list of plates and groups.

<u>PLATE</u>	<u>PAGE</u>	<u>DESCRIPTION OF GROUP</u>

## COLUMBIA MODEL 300-14 R

ADDITIONAL ADJUSTMENTS FOR MODEL 300-14 R

Refer to timing chart, page 10.

LENGTH OF STITCH

Set machine to sew 6 stitches per inch. (#8 on feed regulator). Adjustment 6, Figure 7.

RIB

Set rib in center of cloth opening in the presser foot. Adjustment 10 and 11, Figure 5.

## COLUMBIA MODEL 300-15 - BOOK SEAM MACHINE

THE MODEL 300-15

Model 300-15 is fitted for sewing a turned under edge of the seam of a coat (sometimes referred to as book seaming).

This method of finishing the seams of a coat eliminates piping the seam. \*

The machine is equipped with a work plate, and with a knee lift. (Not shown in photo.)

Folders are available for the various weights of material used in making coats.

INSTRUCTIONS FOR ORDERING PARTS

The parts have been broken up into groups, and these groups are shown below. Turn to the plate showing the group in which the part to be ordered is located, find the part, and order by part number. Part number on your order is incomplete without the # sign following the part number. Following is list of plates and groups.

25	86	Rib Shaft Group.
26	88	Feed Points.

COLUMBIA MODEL 300-20 MACHINE  
HEMMING MACHINE

THE MODEL 300-20

The Model 300-20 is a skip stitch machine for hemming with a two-to-one skip stitch, which means that the needle penetrates the base lay or body fabric every other stitch, and penetrates the hem or folded edge every stitch.

Using the skip stitch method, garments can be sewed equal to, and better than hand work, when the material used is of fair weight, and as the machine was designed to use a curved needle, a blind stitch will be made. On light weight materials, such as dresses made of cotton, silks and rayon, every other stitch will appear on the finished side of the garment as a very small dot, the same as a garment made by hand.

The following operations are examples of work that are produced by the Model 300-20:

Dresses and Blouses - Hemming Bottoms, Sleeves  
and Felling Facings.

Womens Coats - Felling Linings.

Department Store Alterations - Shortening Dresses.

Lingerie.

Hemming Tailored Bottoms.

#### INSTRUCTIONS FOR ORDERING PARTS

The parts have been broken up into groups, and these groups are shown below. Turn to the plate showing the group in which the part to be ordered is located, find the part, and order by part number. Part number on your order is incomplete without the # sign following the part number. Following is list of plates and groups.

ADDITIONAL ADJUSTMENTS FOR MODEL 300-20

Refer to timing chart, page 10.

STITCH LENGTH

Generally set 3 stitches per inch, #9 on stitch regulator, Adjustment 6, Figure 7.

RIB

Set rib in center of cloth opening in the presser foot, Adjustment 9, Figure 5.

CLOTH RETAINER

Rotate hand wheel clockwise until the rib is at the end of its oscillation, and under the needle. Adjust the cloth retainer to just clear the needle, and center the cloth retainer to the rib. To check this setting, insert a strip of paper on each side of the rib, under the retainer; the retainer must clamp both strips of the paper. See Adjustment 7, Figure 6.

# LEFT RIB DRIVE GROUP MODEL 300-12

LEFT HAND RIB GROUP

MODEL

300-12

PLATE 29

14 C 420	Jack Shaft for oscillating left hand rib.
17 C 142	Stud for left hand rib.
18-710	Screw for clamping crank, 448 C 133. Screw for clamping crank, 48-69, for oscillating left hand rib.
18 C 889	Screw for slide block for left hand rib.
44 C 258	Rib Left Hand.
46-116	Link for oscillating left hand rib.
48-69	Crank on Jack shaft for left hand rib. Crank on right hand rib shaft, see Plate No. 27.
69 C 19	Slide Block for left hand rib.
1005	Set Screw for left hand rib stud.
1022	Set Screw for collar, 1284 on Jack shaft.
1284	Collar on left hand rib Jack shaft.
1306	Screws, Bearing, for link 46-116 to oscillate left hand rib.
448-133	Crank with screw for oscillating left hand rib.

# LEFT RIB ADJUSTING GROUP

## MODEL 300-12

LEFT RIB ADJUSTING GROUP

MODEL

PLATE 30

300-12

18 C 94-1	Set Screw for left hand rib dial knob.
18 C 885	Screw for adjusting left hand rib.
18 C 890	Screw for adjusting tension of spring for left hand rib bracket.
20 C 118	Nut for adjusting screw, 18 C 890 for left hand rib bracket.
21-183	Spring for left hand rib bracket.
22 C 214-2	Pin for guiding left hand rib adjustment block.
50 C 212	Left Hand Rib Bracket.
115 C 114	Left Hand Rib Adjustment Block.
444 C 329	Left Hand Rib Adjustment Disc with pin.
4149 C 344	Left Hand Rib Dial Adjusting Knob.
CS 320-1/2	Screw for locking stop screw for left hand rib bracket.
1197	Stop Screw for left hand rib bracket.

# APRON GROUP MODEL 300-12

WORK APRON GROUP

MODEL

300-12

PLATE 31

14 C 419	Shaft for right hand rib.	20 C 106	Nut for adjustable stop screw for work apron.
14 C 421	Shaft in apron for left hand rib bracket.	20 C 117	Nut for work apron spring adjusting screw.
16 C 319	Bushing for rib shaft, right hand end.	21 C 54B	Work Apron Spring.
18 C 94-1	Set Screw for work apron spring hinge joint.	32 C 207	Cover for work apron.
18 C 102	Screw (adjustable stop) for work apron.	44 C 257	Right Hand Rib.
18-120	Set Screw for left hand rib bracket shaft.	61-49	Oil Tube for connecting link.
18-121	Screw in end of left hand rib bracket shaft.	131 C 163-1	"S" Hook for knee lifter.
18-126	Screw Pivot for work apron.	183 C 22	Work Apron.
18-129	Set Screw for work apron pivot screw.	CS 200	Bushing for rib shaft left hand end.
18-808	Screws for work apron cover, 32 C 207.	1246	Pin for right hand rib.
18 C 884	Screw for adjusting work apron spring.	444 C 257	Right Hand Rib complete with rib shaft and pin, 1246.
		471 C 544	Work Apron Spring Hinge Joint.
