INDUSTRIAL SEWING MACHINES

CHICAGO

Printed in U.S.A.

August, 1978

IDENTIFICATION OF MACHINE

Each UNION SPECIAL machine is identified by a Style number which is stamped into the name plate on the machine. Style numbers are classified as standard and special. Standard Style numbers have one or more letters suffixed, but never contain the letter "Z". Example: "Style 53600 A". Special Style numbers contain the letter "Z". When only minor changes are made in a standard machine a "Z" is suffixed to the standard Style number. Example: "Style 53600 AZ".

Styles of machines similar in construction are grouped under a class number which differs from the style number in that it contains no letters. Example: "53600".

APPLICATION OF CATALOG

This catalog applies specifically to the Standard Styles of machines as listed herein. It can also be applied with discretion to some Special Styles of machines in this class. Reference to direction, such as right, left, front, back, etc., are given from the operator's position while standing at the machine. Operating direction of handwheel is toward the left.

STYLES OF MACHINES

Streamlined Flat Bed, High Throw, 1 1/2 Inch Needle Travel, Single Needle Machine, Enclosed Automatic Lubricating System From Two Reservoirs, Lateral Looper Travel, Mechanical Chain Cutter, Distance From Center Line of Needle to Lower Edge of Throat Plate Support 5/8 Inch.

53600 A For closing bags made from medium and heavy weight cotton, osnaburg, or burlap. Seam Specification 401-SSa-1 or 401-SSn-1. Stitch range 3 to 6 per inch.

53600 H For closing bags made from medium and heavy weight burlap and single ply or multi-wall paper. Seam Specification 401-SSa-1 or 401-SSn-1. Stitch range 3 to 5 per inch.

NEEDLES

Each UNION SPECIAL needle has both a type number and size number. The type number denotes the kind of shank, point, length, groove, finish and other details. The size number, stamped on the needle shank, denotes the largest diameter of blade measured in thousandths of an inch, midway between the shank and the eye. Collectively, the type number and the size is the complete symbol.

Standard needle for Style 53600 A is Type 144 G. It has a round shank, round point, No. 2 bag, double groove, spotted, short point, chromium plated - sizes 054, 200/080, 230/080, 230/090.

Standard needle for Style 53600 H is Type 943 G. It has a round shank, spear point, No. 2 bag, double groove, spotted, chromium plated - sizes 170/067, 185/073, 200/080, 230/090, 250/100.

To have needle orders promptly and accurately filled, an empty package, a sample needle, or the type and size number should be forwarded. Use description on label. A complete order would read as follows: "1000 Needles, Type 144 G, Size 200/080".

Selection of the proper needle size should be determined by size of thread used. Thread should pass freely through needle eye in order to produce a good stitch formation.

USE GENUINE NEEDLES AND REPAIR PARTS

Success in the operation of these machines can be secured only with genuine UNION SPECIAL Needles and Repair Parts as furnished by the Union Special Corporation, its subsidiaries and authorized distributors. They are designed according to the most approved scientific principles, and are made with utmost precision. Maximum efficiency and durability are assured.

Genuine needles are packaged with labels marked *Union Special*®. Genuine repair parts are stamped with the Union Special trademark, U S Emblem. Each trademark is your guarantee of the highest quality in materials and workmanship.

IDENTIFYING PARTS

Where construction permits, each part is stamped with its part number. On some of the smaller parts, and on those where construction does not permit, an identification letter is stamped in to distinguish the part from similar ones.

Part numbers represent the same part, regardless of catalog in which they appear.

IMPORTANT! ON ALL ORDERS, PLEASE INCLUDE PART NAME AND STYLE OF MACHINE FOR WHICH PART IS ORDERED.

TERMS

Prices are strictly net cash and are subject to change without notice. All shipments are forwarded f.o.b. shipping point. Parcel Post shipments are insured unless otherwise directed. A charge is made to cover postage and insurance.

OILING

The oil has been drained from the machine before shipping, and the reservoirs must be filled before beginning to operate. Use a straight mineral oil with a Saybolt viscosity of 90 to 125 seconds at 100° Fahrenheit.

Oil is filled at the spring cap on the left side of the machine just below the pulley, and is checked at the sight gauge in front of the spring cap. The oil level should be kept near the top of this sight gauge. The oil cup, located on the left side of machine in back of the needle lever stud, should be filled twice daily.

The following is a numerical list of parts used in Styles 53600 A, 53600 H. Quantities, part numbers and descriptions are given. Unless otherwise specified, the parts listed are for both machines. Following the parts list are photographs of some of the major parts.

Amt.	Part No.	Description	Amt.	Part No.	Description	Amt.	Part No.	Description
1	8	Looper Drive Lever Shaft	1	666-47	Felt Oil Wick for 29126 CK	1	15430 D	Nut for needle lever connecting rod tube 51216, right thread

1	53678 G	Knife Lever (98)	1	53682 T	Cover Plate for Style 53600 H (22848)	2	53694 F	Gasket for 53694
1	53678 N	Washer for 22585 A	1	53682 U	Cloth Plate Cover, right	1	53694 G	Oil Reservoir Wick
1	53680 D	Throat Plate Support Bracket, left (667 C-12, 22653 D-8)	1	53682 V	Cloth Plate Cover, left (22848)	1	53694 H	Elbow for 53694
1	53680 E	Throat Plate Support Bracket, right (667 C-12, 22653 D-8)	1	53683	Presser Foot Lifter	1	53758	Thread Eyelet (20, 22848)
1	53680 F	Throat Plate Support for Style 53600 H (80, 22839 C)	1	53690 A	Main Shaft Housing (22569 B)	1	53783 A	Presser Foot Lifter Lever Link (402, 22758 C)
1	53680 G	Throat Plate Support for Style 53600 A (80, 22839 C)	1	53690 B	Bushing for 53690A	1	53783 C	Presser Bar Connection and Guide (22560 B)
			3	53690 C	Main Shaft Bushing, lower	1	53783 L	Presser Foot Lifter Lever Bell Crank (22557 B)
			1	53693	Oil Tube for main oil wick	1	53783 M	Presser Foot Lifter Lever Connecting Rod
			1	53693 A	Oil Tube for looper connecting rod ball joint, left	1	53783 N	Presser Foot Lifter Lever, internal (22537, 39552 C)
			1	53693 B	Oil Tube for looper avoid eccentric	1	56354 A	Needle Lever Link for 29348 D
			1	53693 C	Oil Tube for feed eccentric connecting rod	1	56390 E	Crankshaft Bearing Housing Gasket
						1	61351 C	Washer for 53678 C
						1	80675	Knife, stationary (75 C, 53634 C)

NOTE: Numbers in parenthesis following parts' description indicate the screws, nuts, etc., used to attach or hold these parts.

29476 FV Crankshaft Complete

Here are Oil Specifications for Union Special Sewing Machines

Specification 174 specifies a high quality petroleum oil, viscosity 100 seconds at 100°F. Recommended for all oiling applications on high speed machines.

Specification 175 specifies a high quality petroleum oil, viscosity 100 seconds at 100°F., water white or with a maximum A.S.T.M. color number of 1. *For use where freedom from oil staining is paramount.*

Specification 87 specifies a high quality petroleum oil, viscosity 300 seconds at 100°F.

Specification 100 specifies a general purpose high quality grease for use in ball bearings and transmitters. It is similar to commercial N.L.G.I., grease No. 3. Where No. 3 grease is not obtainable, No. 2 may be used.

UNION SPECIAL

SPECIFICATION NO.	174	175	87
Viscosity S.S.U. at 100°F	90-125	90-125	300-350
Flash (Min.)	350	350	350
Pour (Max.)	20	20	20
Color A.S.T.M. (Max.)	3	1	3
Neutralization No. (Max.)	0.10	0.10	0.10
Viscosity Index			
(D & D Min.)	85	85	85
Compounding	None	None	None
Copper Corrosion (Max.)	1A	1A	1A

*Anline No. 175-225 175-225 175-225

*Used with Buna N Rubber "O" Retainers

NOTE 1: The use of non-corrosive additives in oils meeting above classification is desirable but not essential. These may include:

1. Oxidation inhibitors
2. Rust inhibitors
3. Lubricity additives
4. Anti-oxidants
5. Film strength additives

These additives must be completely soluble in the oil and not removable by wick feeding nor shall they separate.

NOTE 2: Oils containing the following type additives shall not be used at any time:

1. Extreme pressure additives—corrosive
2. Tackiness or adhesive additives
3. Lead soap additives
4. Detergents
