## IDENTIFICATION OF MACHINES

Each UNION SPECIAL machine carries a Style number, which on these Classes of machines, is stamped into the style plate affixed to the right front of machine.

The serial number is stamped in the casting at the right rear base of machine.

### CLASS DESCRIPTION (56200)

Advanced high speed, low or medium throw, flat bed machines. Single needle, one looper, enclosed automatic lubricating system. Maximum recommended speed 6500 R.P.M. Maximum work space to right of needle bar 8 1/4 inches (209.6mm).

### MACHINE STYLES

- 56200 H Low throw machine. Typical application - For miscellaneous seaming operations on light to medium weight wash and wear materials where chaining and a short stitch are required. Seam specification 401 SSa-1. Type 101 GS needle.
- 56200 K Low throw machine. Typical application - For binding aprons and dresses made with light to medium weight materials. Seam specification 401 BSc-1. Type 106 GLS needle. Uses cut edge binding 3/4, 7/8, 1, 1 1/8, 1 1/4 inch (19.0, 22.2, 25.4, 28.6, 31.8mm) wide and produces a 7/32, 1/4, 9/32, 11/32, 13/32 inch (5.6, 6.4, 7.1, 8.7, 10.3mm) finish, respectively.
- #56200 L Medium throw machine. Typical application - For binding mattress ticks made with medium to medium heavy weight materials. Seam specification 401 BSa-1. Type 126 GS needle. Uses selvage edge binding 5/8, 3/4, 7/8 inch (15.9, 19.0, 22.2mm) wide and produces a 5/16, 3/8, 7/16 inch (7.9, 9.5, 11.1mm) finish, respectively.
- \*56200 R Low throw machine. Typical application - For joining shoulders of shirts in one operation made with light to medium weight materials. Seam specification 401 LSe-1. Type 106 GLS needle.
- 56200 S Low throw machine. Typical application - For miscellaneous operations on woven materials, knitted drawer bands, knitted shirt fronts made with light to medium weight materials. Seam specification 401 SSa-1. Type 108 GHS needle.
- 56200 W Medium throw machine. Typical application - For seaming cotton flannel and leather palm gloves. Seam specification 401 SSa-1. Type 128 GAS needle.

### CLASS DESCRIPTION (56300)

Advanced high speed, medium or high throw, flat bed machines. Single needle, one looper, enclosed automatic lubricating system. Maximum work space to right of needle bar 8 1/4 inches (209.6mm).

#Discontinued - Replaced by Style 56300 M.

\*Discontinued - In most instances, replacement parts are available.

CLASS DESCRIPTION (56300 Continued)

MACHINE STYLES

- 56300 E Medium throw machine, equipped with thumbscrew adjustable frame needle thread eyelet, automatic chain cutter and pressure release attachment. Typical application - For seaming trousers and coats made with medium to medium heavy weight materials. Seam specification 401 SSa-1. Type 128 GBS needle. Maximum recommended speed 6500 R.P.M.
- 56300 F Medium throw machine, equipped with thumbscrew adjustable frame needle thread eyelet and a feeding presser foot. Typical application - For seaming trousers and coats made with medium to medium heavy weight durable press materials. Seam specification 401 SSa-1. Type 128 GBS needle. Maximum recommended speed 6500 R.P.M.
- 56300 G Medium throw machine, equipped with thumbscrew adjustable frame needle thread eyelet. Typical application - For seaming trousers, coats and similar garments, made of medium to medium heavy weight materials. Seam specification 401 SSa-1. Type 128 GBS needle. Maximum recommended speed 6500 R.P.M.
- 56300 H High throw machine. Typical application - For seaming couch covers, with or without rope welt made with medium heavy to heavy weight materials. Welt guided to the left of needle. Seam specification 401 SSa-1 or 401 SSk-1 modified. Type 143 GS needle. Maximum recommended speed 6000 R.P.M.
- 56300 M High throw machine. Typical application - For binding mattress ticks made with medium heavy to heavy weight materials. Seam specification 401 BSa-1. Type 126 GS needle. Uses selvage edge binding 5/8, 3/4 and 7/8 inch (15.8, 19.0 and 22.2mm) wide, and produces a 5/16, 3/8 and 7/16 inch (7.9, 9.5 and 11.1mm) finish respectively. Maximum recommended speed 6000 R.P.M.
- 56300 N Medium throw machine, equipped with thumbscrew adjustable frame needle thread eyelet and top-grip feed mechanism. Typical application - For edge seaming operations on trousers, slacks, dress pants, jackets made of light to medium weight durable press materials. Maximum seam width is 1 inch (25.4mm) necessitated by the top-grip-feed mechanism. Seam specification 401 SSa-1. Type 128 GBS needle. Maximum recommended speed 6500 R.P.M.
- 56300 R Medium throw machine, equipped with thumbscrew adjustable frame needle thread eyelet and feeding presser foot. Typical application - For seaming side and inseams on trousers, back and side seams on coats, sleeve seams on jackets, coats made with medium to medium heavy weight materials. Seam specification 401 SSa-1. Type 128 GBS needle. Maximum recommended speed 6500 R.P.M.
- \*56300 U Medium throw machine, equipped with thumbscrew adjustable frame needle thread eyelet and top-grip-feed mechanism. Typical application - For edge seaming operations on trousers, slacks, dress pants, jackets and similar garments made of light to medium weight materials. Maximum seam width is 1 inch (25.4mm) necessitated by the top-grip-feed mechanism. Seam specification 401 SSa-1. Type 128 GBS needle. Maximum recommended speed 6500 R.P.M.

\*Discontinued - In most instances, replacement parts are available.

## MACHINE STYLES (Continued)

- 56300 W Medium throw machine, equipped with zipper guiding presser foot for crossing zipper attached to pants fly. Typical application - For attaching waistbands to men's trousers. Seam specification 401 SSa-1. Type 128 GAS needle. Maximum recommended speed 6500 R.P.M.
- \*56300 X Medium throw machine, equipped with thumbscrew adjustable frame needle thread eyelet, top-grip-feed mechanism and presser foot with yielding section to the left of needle. Typical application - For edge seaming operations on trousers, slacks, dress pants, jackets and similar garments made of light to medium weight materials. Maximum seam width is 1 inch (25.4mm) necessitated by the top-grip-feed mechanism. Seam specification 401 SSa-1. Type 128 GBS needle. Maximum recommended speed 6500 R.P.M.
- 56300 AH Medium throw machine, equipped with thumbscrew adjustable frame needle thread eyelet, top-grip-feed mechanism and presser foot with yielding section to the left of needle. Typical application - For edge seaming operations on trousers, slacks, dress pants, jackets and similar garments made of light to medium weight durable press materials. Maximum seam width is 1 inch (25.4mm) necessitated by the top-grip-feed mechanism. Seam specification 401 SSa-1. Type 128 GBS needle. Maximum recommended speed 6500 R.P.M.
- 56300 AL Medium throw machine, equipped with thumbscrew adjustable frame needle thread eyelet. Typical application - For miscellaneous operations on paper garments and plastic products requiring a long stitch. Stitch range is 4 to 7 per inch. Seam specification 401 SSa-1. Type 128 GAS needle. Maximum recommended speed 6000 R.P.M.

## CLASS DESCRIPTION (56400)

Advanced high speed, low throw, flat bed machines. Two needles, independent row, left needle in front, two loopers, enclosed automatic lubricating system. Type 106 GHS needle. Prepared for use with knee press for foot lifter. Maximum recommended speed 6500 R.P.M. Maximum work space to right of needle bar 8 1/4 inches (209.6mm).

## MACHINE STYLES

- 56400 D To be used with Galkin close-coupled puller. Attachments not furnished with machine. Typical application - For hemming and simultaneously inserting elastic in tops and legs of knitted undergarments made with light to medium weight materials. Seam specification 401 EFg-2. Standard gauge Nos. 12, 16.
- 56400 P Typical application - For piecing sleeves, joining shoulders, setting sleeves of ordinary quality shirts made with light to medium weight materials. Seam specification 401 LSc-2. Standard gauge Nos. 6, 8, 10, 12, 16, 18.
- 56400 R Typical application - For attaching set-on center plaits and interlining strip to skirts made with light to medium weight materials. Starts operating at neck. Seam specification 401 LSm-2. Type 106 GHS needle. Standard gauge No. 48. Maximum recommended speed 6500 R.P.M.

\*Discontinued - In most instances, replacement parts are available.

## MACHINE STYLES (Continued)

- 56400 S Typical application - For folding and attaching inside button facings to fronts of shirts made with light to medium weight materials. Start operations at the neck. Facing strip guided next to feed dog. Seam specification 401 LSm-2. Type 106 GHS needle. Standard gauge No. 48. Maximum recommended speed 6500 R.P.M.
- 56400 T Typical application - For piecing sleeves, joining shoulders and setting sleeves of extra fine quality shirts made with light to medium weight materials. Seam specification 401 LSc-2. Type 106 GHS needle. Standard gauge Nos. 8, 10, 12, 16. Maximum recommended speed 6500 R.P.M.
- 56400 W Typical application - For piecing sleeves of shirts and pajamas, joining operations on woven shorts made with light to medium weight materials, where the majority of the work consists of straight seams. Seam specification 401 LSc-2. Type 106 GHS needle. Standard gauge Nos. 8, 10, 12, 16. Maximum recommended speed 6500 R.P.M.
- 56400 X Typical application - For quilting collar bands of shirts made with light to medium weight materials. No. 26 gauge is equipped with a folder so that this machine can also be used for setting sleeves on extra fine quality shirts. Seam specification 401 SSa-2 or 401 LSc-2. Type 106 GHS needle. Standard gauge Nos. 24, 26. Maximum recommended speed 6500 R.P.M.

## CLASS DESCRIPTION (56500)

Advanced high speed, high throw, flat bed machines. Two needles, independent row, two loopers, enclosed automatic lubricating system. Maximum work space to right of needle bar 8 1/4 inches (209.6mm).

## MACHINE STYLES

- 56500 A Typical application - For seat seaming operations on trousers and similar garments made of medium heavy to heavy weight materials. Seam specification 401 SSa-2. Type 130 GS needle. Available for 5 stitches per inch only. Standard gauge No. 1 only. Maximum recommended speed 6000 R.P.M. (Formerly known as Style 56500 N-5).
- 56500 B Typical application - For seaming trousers and similar garments made of medium heavy to heavy weight materials. Seam specification 401 SSa-2. Type 130 GS needle. Available for 7 stitches per inch only. Standard gauge No. 1 only. Maximum recommended speed 6000 R.P.M. (Formerly known as Style 56500 N-7).
- 56500 C Typical application - For seaming trousers and similar garments made of medium heavy to heavy weight materials. Seam specification 401 SSa-2. Type 130 GS needle. Available for 10 stitches per inch only. Standard gauge No. 1 only. Maximum recommended speed 6000 R.P.M. (Formerly known as Style 56500 N-10).
- 56500 J Typical application - For felling overalls, coats, combination suits and similar garments made of medium heavy weight materials. Seam specification 401 LSc-2. Type 128 GS needle. Standard gauge Nos. 16, 18. Maximum recommended speed 6000 R.P.M., depending on material or operation.

## MACHINE STYLES (Continued)

- 56500 R Typical application - For attaching risers to dungarees, piecing sleeves on denim jackets and for attaching overall bibs made of medium heavy to heavy weight materials. Seam specification 401 LSc-2. Type 128 GS needle. Standard gauge No. 18. Maximum recommended speed 6000 R.P.M., depending on material or operation.
- 56500 U Typical application - For seaming trousers made of durable press material or medium heavy to heavy weight materials. Seam specification 401 SSa-2. Type 130 GS needle. Available for 7 stitches per inch only. Standard gauge No. 1 only. Maximum recommended speed 6000 R.P.M.

## CLASS DESCRIPTION (56700)

Advanced high speed, low throw, flat bed machines. Two needles, independent row, needles abreast, two loopers, enclosed automatic lubricating system. Maximum work space to right of needle bar 8 1/4 inches (209.6mm).

## MACHINE STYLE

- 56700 J Equipped with "Tru-Front" folder. Typical application - For one operation folding and attaching "Set-on" center plait and interlining strips to fronts of shirts and similar garments made of light to medium weight materials. Starts operation at neck. Plaits used in garment lengths and extends 1/4 inch (6.4mm) beyond the rows of stitching. Seam specification 401 LSm-2. Type 108 GKS needle. Standard gauge Nos. 56, 64. Maximum recommended speed 6500 R.P.M.

## CLASS DESCRIPTION (56900)

Advanced high speed, high throw, flat bed machines. Three needles, independent row, left needle in front, three loopers, enclosed automatic lubricating system. Maximum recommended speed 6000 R.P.M. Maximum work space to right of needle bar 8 1/4 inches (209.6mm).

## MACHINE STYLES

- 56900 H Typical application - For setting sleeves, shoulder seaming on denim jackets made with medium heavy to heavy weight materials. Seam specification 401 LSc-3. Type 128 GAS needle. Standard gauge Nos. 8, 9.
- 56900 J Typical application - For seaming operations on jackets made of medium heavy to heavy weight materials. Seam specification 401 LSb-3. Type 147 GKS needle. Standard gauge No. 9.
- 56900 P Typical application - For attaching risers to the back of jeans made with medium heavy to heavy weight materials. Seam specification 401 LSc-3. Type 147 GKS needle. Standard gauge No. 9.
- 56900 R Typical application - For seat seams, outseam or inseam on jeans made from heavy weight denim. Seam specification 401 LSc-3. Type 147 GS needle. Standard gauge No. 9.

## NEEDLES

Each needle has both a type and size number. The type number denotes the kind of shank, point, length, groove, finish and other details. The size number, stamped on the needle shank, denotes largest diameter of blade, measured midway between shank and eye. Collectively, type and size number represent the complete symbol, which is given on the label of all needles packaged and sold by UNION SPECIAL.

To have needle orders promptly and accurately filled, an empty package, a sample needle, or the type and size number should be forwarded. Use description on label. A complete order would read: "1000 needles, Type 106 GHS, Size 090/036".

The type numbers of the needles recommended for each style of machine covered by this catalog are given in the machine style or class description. Other needles are available, but the ones indicated are those recommended to produce the most satisfactory results. The type numbers of the recommended needles together with their descriptions, and the sizes available are listed below:

<u>Type No.</u>	<u>Description and Sizes</u>
101 GS	Round shank, round point, extra short, double groove, struck groove, chromium plated - sizes 022, 025, 027, 080/032, 049, 054.
106 GHS	Round shank, round point, extra short, double groove, struck groove, ball eye, ball point, chromium plated - sizes 070/027, 075/029, 090/036.
108 GHS	Round shank, round point, extra short, double groove, struck groove, ball eye, ball point, spotted, chromium plated - sizes 070/027, 075/029, 080/032, 090/036, 100/040 110/044, 125/049.
108 GKS	Round shank, round point, extra short, double groove, struck groove, oversize ball eye, spotted, chromium plated - sizes 080/032, 090/036, 100/040.
126 GS	Round shank, round point, short, double groove, struck groove, ball eye, chromium plated - sizes 080/032, 100/040, 054.
128 GS	Round shank, round point, short, double groove, struck groove, ball eye, spotted, undersize eye and groove 27% of size of needle, chromium plated - sizes 090/036, 100/040, 110/044, 125/049, 140/054.
128 GAS	Round shank, round point, short, double groove, struck groove, ball eye, spotted, chromium plated - sizes 080/032, 090/036, 100/040, 110/044, 125/049, 140/054, 150/060, 170/067.
128 GBS	Round shank, round point, short, double groove, struck groove, ball eye, spotted, ball point, chromium plated - sizes 080/032, 090/036, 100/040, 110/044, 125/049, 140/054, 150/060.
130 GS	Round shank, round point, short, double groove, struck groove, ball eye, spotted, government, chromium plated - sizes 080/032, 090/036, 100/040, 110/044, 125/049, 140/054, 150/060.

## NEEDLES (Continued)

<u>Type No.</u>	<u>Description and Sizes</u>
143 GS	Round shank, round point, No. 2 bag, double groove, struck groove, spotted, chromium plated - sizes 140/054, 150/060, 170/067, 230/090.
147 GKS	Round shank, round point, long, double groove, struck groove, over-size ball eye, spotted, short point, standard eye and grooves, chromium plated - sizes 090/036, 100/040, 110/044, 125/049, 140/054.

Selection of proper needle size is determined by size of the thread used. Thread should pass freely through needle eye in order to produce a good stitch formation.

## LUBRICATION

Use a straight mineral oil with a Saybolt viscosity of 90 to 125 seconds at 100 degrees F. This is equivalent to Union Special Corporation Specification No. 175.

Before operating, fill machine with oil at plug screw (A, Fig. 1). While filling machine with oil, check gauge (B). When proper oil level is reached, gauge needle will register on black line marked "FULL". Oil must be added when gauge needle registers on black line marked "LOW". Although the machine can be operated safely when gauge needle registers in the "OPERATE" zone, it is recommended to always check oil level before operating, to be sure machine is filled with oil to the "FULL" mark. CAUTION: DO NOT over fill machine.

To drain oil, remove plug screw (C), or lower crank chamber cover on back of machine. Oil must be changed every 2000 operating hours to minimize wear.

On new machines, or a machine out of service for an extended period of time; lubricate machine as follows:

Remove head cover, clean out lint, then directly oil needle bar link and needle bar. Replace head cover and fill machine with oil to proper level. Run machine at low RPM to ensure proper lubrication of components preventing any damage which may occur from lack of oil distribution.

Fig. 1

Fig. 2

**THREADING AND OILING DIAGRAM  
FOR ALL STYLES EXCEPT 56300 E,F,G,N,R,U,X,AH and AL**

Oil has been drained from machine before shipping and the reservoir must be filled before starting to operate. Maintain oil level in "OPERATE" zone; add oil when needle of gauge registers on the black line marked "LOW". Machine is automatically lubricated and no oiling other than keeping the main reservoir filled is necessary. Refer to instructions under "LUBRICATION" and "CHANGING STITCH LENGTH" for additional information.

Thread machine as illustrated above for all Styles except 56300 E,F,G,N,R,U,X, AH and AL.

Fig. 2A

**THREADING AND OILING DIAGRAM  
FOR STYLES 56300 E,F,G,N,R,U,X,AH and AL**

Oil has been drained from machine before shipping and the reservoir must be filled before starting to operate. Maintain oil level in "OPERATE" zone; add oil when needle of gauge registers on the black line marked "LOW". Machine is automatically lubricated and no oiling other than keeping the main reservoir filled is necessary. Refer to instructions under "LUBRICATION" and "CHANGING STITCH LENGTH" for additional information.

Thread machine as illustrated above for Styles 56300 E,F,G,N,R,U,X,AH and AL.

## ADJUSTING INSTRUCTIONS

NOTE: Instructions stating direction or location, such as right, left, front or rear of machine, are given relative to operator's position at the machine. The handwheel rotates counterclockwise, in operating direction; when viewed from the right end of machine.

### OIL GAUGE CALIBRATION

To recalibrate oil gauge, follow instructions in sequence as listed:

- Place machine upright on a level surface.
- Remove plug screw (C, Fig. 1) and tip machine forward to drain all oil from reservoir.
- Remove lower crank chamber cover on back of machine.
- Fill reservoir until oil is even with bottom of knee press shaft bushing (D).
- Loosen locknut (E) and rotate calibrating screw (F) as required until gauge needle registers on the black line marked "LOW".
- Tighten locknut (E), then replace plug screw (C) and lower crank chamber cover.
- Fill machine with oil until gauge needle registers on black line marked "FULL".

Fig. 3

### NEEDLE BAR ALIGNMENT (TWO AND THREE NEEDLE MACHINES)

Insert a new set of needles (type and size required). Turn handwheel to bring needle bar (A, Fig. 3) down to ensure that needles center in needle holes of throat plate as shown in Fig. 3. Adjustment can be made by loosening screw (B) slightly, allowing needle bar to be turned as required. Tighten clamp screw.

### SYNCHRONIZING LOOPER AND NEEDLE MOTIONS

Insert looper into the looper rocker, pushing it all the way down and tighten screw against flat on shank of looper. Turn handwheel in operating direction until the point of the looper (A, Fig. 4) moving to the left, is even with the left side of the right needle (B). Note the height of the eye of the needle with respect to the looper point (See Fig. 5). Turn the handwheel in the reverse direction until the point of looper again moving to the left, is even with the left side of right needle (See Fig. 5). If the height of the eye of the needle with respect to the looper point are the same, looper and needle motions are synchronized - a variation of .005 inch (.127mm) is allowable.

Fig. 4

## SYNCHRONIZING LOOPER AND NEEDLE MOTIONS (Continued)

If the distance from the eye of the needle to the point of the looper is greater when the handwheel is turned in the operating direction, the looper drive lever rocker shaft will have to be moved slightly towards the rear. Moving the shaft towards the front acts the reverse.

NOTE: The 1/64 inch (.4mm) dimension shown in Fig. 5 is for final setting of needle bar height.

Fig. 5

Adjust looper drive rocker lever shaft as follows:

Loosen screw (C, Fig. 4) in looper drive lever (D). A rod of .146-40 thd. or Union Special Screw No. 22870 A can be threaded into the looper drive lever rocker shaft through the center of thrust adjusting screw (E). Tap or pull slightly as required to position shaft for proper synchronization. Tighten screw (C) securely and remove rod or screw used to position shaft. Loosen lock nut (F) and TORQUE thrust adjusting screw (E) to 6 in. lbs. (7cm/kg); re-tighten lock nut (F) securely.

Fig. 6

With looper at extreme right end of its travel, check location of the centerline of right looper connecting rod bearing using gauge No. 21227 CX for all Classes except 56700 which uses gauge No. 21227 CX-56 for Style 56700 J-56 and No. 21227 CX-64 for Style 56700 J-64. Remove nut from looper lever stud (A, Fig. 6) and place hole in gauge (B) over threaded stud. The left end of gauge should locate against the RIGHT side of looper rocker cone (C). If adjustment is necessary, loosen clamp screw (D), reposition looper drive lever (E) as required and retighten screw (D). If gauge is not available, setting can be checked with a scale. "X" dimension is from centerline of stud (A) to centerline of cone (C) which should be 4 1/16 inch (103.2mm) for all Classes except 56700. Style 56700 J-56 should be a 3 5/8 inch (92.1mm) and Style 56700 J-64 should be 3 9/16 inch (90.6mm) with looper at extreme right end of travel.

### LOOPER SETTINGS

Insert a new needle, type and size as specified. If the looper gauge is 5/32 inch (4.0mm), for example, set the looper (A, Fig. 7) so the distance from the center of the needle (B) to the point of the looper is 5/32 inch (4.0mm), when the looper is at its farthest position to the right.

Fig. 7

## LOOPER SETTINGS (Continued)

Looper gauge No. 21225-5/32 (C) can be used advantageously in making this adjustment. On two needle machines set the back looper to the right needle and on three needle machines set the middle looper to the middle needle, when setting the looper gauge. Refer to chart for needle Type, looper gauge setting and looper gauge number. If adjustment is required, loosen nut (D) (it has a left hand thread) and nut (E) on connecting rod (F), turn the connecting rod forward or backward to obtain the 5/32 inch (4.0mm) dimension. Retighten both nuts, first nut (E), then nut (D). Make sure the left ball joint is in vertical position and does not bind after adjustment.

Machine Styles	Needle Type	Looper Gauge Setting	Looper Gauge Number
56200 H	101 GS	1/8 Inch (3.2mm)	21225-1/8
56200 K,R	106 GLS	1/8 Inch (3.2mm)	21225-1/8
56200 L	126 GS	5/32 Inch (4.0mm)	21225-5/32
56200 S	108 GHS	1/8 Inch (3.2mm)	21225-1/8
56200 W, 56300 W,AL	128 GAS	5/32 Inch (4.0mm)	21225-5/32
56300 E,F,G,N,R, U,X,AH	128 GBS	5/32 Inch (4.0mm)	21225-5/32
56300 H	143 GS	5/32 Inch (4.0mm)	21225-5/32
56300 M	126 GS	5/32 Inch (4.0mm)	21225-5/32
56400 D	106 GHS	1/8 Inch (3.2mm)	21225-1/8
56400 P,R,S,T,W,X	106 GHS	1/8 Inch (3.2mm)	21225-1/8
56500 A,B,C,U	130 GS	5/32 Inch (4.0mm)	21225-5/32
56500 J,R	128 GS	5/32 Inch (4.0mm)	21225-5/32
56700 J	108 GKS	1/8 Inch (3.2mm)	21225-1/8
56900 H	128 GAS	5/32 Inch (4.0mm)	21225-5/32
56900 J	147 GKS	7/32 Inch (5.6mm)	21225-7/32
56900 P	147 GKS	5/32 Inch (4.0mm)	21225-5/32
56900 R	147 GS	7/32 Inch (5.6mm)	21225-7/32

The looper is set correctly if, as it moves to the left behind the needle, its point (A, Fig. 8) clears the rear of needle (B) by .002 inch (.051mm).

Fig. 8

If adjustment is necessary, loosen lock screw (G, Fig. 7) and turn stop screw (H) as required. Turning stop screw clockwise sets the looper to the rear and turning it counterclockwise acts the reverse. Holding looper to the front while making this adjustment may prove helpful. Tighten lock screw when setting is obtained and recheck the adjustment.

On Style 56200 W, looper needle guard (attached to looper) should be set to barely contact the front of needle without deflecting as looper moves to left.

On the two and three needle machines, insert the other needles and loopers. The same looper - needle relationship should exist without any adjustment, other than applying pressure on the looper at front or back of blade, while clamping looper in looper rocker, so as to get the proper in-line-of-feed setting.

## NEEDLE BAR HEIGHT

The height of the needle is correct when the top of its eye is  $\frac{1}{64}$  inch (.4mm) below the underside of the looper, with the looper point flush with the left side of the needle as shown in Fig. 5. On Styles 56500 A, B and C the top of the needle eyes should be even with the underside of the looper when the looper point is flush with the left side of the needle. If adjustment is necessary, loosen screw (B, Fig. 3) and move needle bar (A) up or down as required and retighten screw. On two and three needle machines, care should be taken not to disturb alignment of needle bar when moving the needle bar either up or down. The descending needles must be deflected alike on the back of the loopers.

Fig. 9

## FEED DOG SETTINGS

Feed dog (A, Fig. 9) should be centered in throat plate (B) with equal clearance on all sides and ends with feed travel set to desired stitch length. At highest point of travel, tips of feed dog teeth should extend the depth of a tooth or approximately  $\frac{3}{64}$  inch (1.2mm) above throat plate and parallel to same. Screw (C) should be set to support feed dog after screw (D) has been loosened which secures feed dog in position.

Fig. 10

On Styles 56300 N,U,X,AH the tips of the teeth must extend  $\frac{1}{32}$  inch (.8mm) above the throat plate and the "Grip Feed" presser foot feed dog must line with the lower feed dog left to right, and in-line-of-feed the last teeth of the top and bottom feeds should match tooth point to point.

Parallel adjustment can be made by loosening nut (A, Fig. 10) and turn screw (B) clockwise to lower front of feed dog, counterclockwise acts the reverse. When properly set, retighten nut (A).

Right to left adjustment can be made by loosening screws (A, Fig. 11) and slightly move feed rocker (B) on feed rocker shaft (C) as required, then retighten screws. Check to ensure that feed rocker arm (D) does not bind after adjustment.

Fig. 11

Forward or rearward centering of feed dog can be accomplished by loosening nut (E, Fig. 11), move feed rocker (B) as required and retighten nut.

## CHANGING STITCH LENGTH

Set the stitch to required length. This is accomplished by loosening locknut (F, Fig. 11) 1/2 turn (it has a left hand thread) on the end of the stitch regulating stud and turning stitch adjusting screw (G) located under the left end of the cloth plate, in the head of main shaft (H), which is marked with "L" and "S". Turning the screw clockwise shortens the stitch (moves stitch regulating stud toward the "S") and turning it in a counterclockwise direction lengthens the stitch (moves stitch regulating stud toward the "L"). Retighten locknut securely. To prevent destructive damage to the feed drive bearing, key screw (J) must engage the "U" shaped key slot in ferrule (K).

NOTE: Any change in stitch length will necessitate a corresponding change in the rear needle guard setting.

Machines having needle bearings in the feed rocker at locations (L, Fig. 11) may require repacking after years of service. Bearings should be thoroughly cleaned and repacked with Union Special Corporation grease No. 28604 P.

## REAR NEEDLE GUARD

At extreme forward end of travel, rear needle guard (C, Fig. 10) must be set horizontally not to contact rear of needle (D) with a maximum clearance of .005 inch (.127mm). Guard should be set as low as possible, yet have its vertical face approach approximately 3/64 inch (1.2mm) of needle point until point of looper (E), moving to the left, is even with the needle. To move needle guard forward or backward, loosen screw (F), move needle guard as required, and retighten screw. To raise or lower needle guard, loosen screw (F), and turn screw (G) clockwise to lower needle guard or counterclockwise to raise it. Retighten screw (F) after guard is properly set.

NOTE: Any change in stitch length will require a change in rear needle guard setting.

## THREADING (FOR ALL STYLES EXCEPT 56300 E,F,G,N,R,U,X,AH and AL)

Draw the looper and needle threads into the machine and start operating on a piece of fabric. Refer to threading diagram (Fig. 2) for the threading of these machines.

## THREAD TENSIONS

The tension on the needle thread should be only sufficient to produce uniform stitches on the under surface of the fabric.

The looper thread tension is applied at the cast-off support tension disc assembly, and the adjusting nut should be set so that the tension on the looper thread is just sufficient to steady the thread.

## THREAD TENSION RELEASE

The thread tension release is set correctly when it begins to function as the presser foot is raised to within 1/8 inch (3.2mm) of the end of its travel and is entirely released when the presser foot has reached its highest position.

## THREAD TENSION RELEASE (Continued)

If adjustment is required, loosen tension release lever screw (A, Fig. 12), located at the back of machine and move tension disc separator as required. Retighten screw. After adjustment there should be no binding at any point.

### PRESSER BAR HEIGHT

Height of presser bar (A, Fig. 13) is correct when presser foot can be removed by depressing foot lifter lever (B, Fig. 12). There should be approximately 1/16 inch (1.6mm) clearance between lower surface of presser bar connection and guide (B, Fig. 13) and bottom surface of head opening in bed casting when foot lifter lever is released and presser foot lying flat on throat plate with feed dog below throat plate.

Fig. 12

Adjustment can be made by turning handwheel to position needle bar at bottom of stroke. Loosen screw (C, Fig. 13) and while holding presser foot down on throat plate, position presser bar connection and guide as required to attain specified clearance and retighten screw.

### PRESSER FOOT PRESSURE

Regulate presser spring regulating screw (A, Fig. 14) so that it exerts only enough pressure on the presser foot to feed the work uniformly when a slight tension is placed on the fabric. Turning it clockwise increases the pressure, counterclockwise acts the reverse.

Fig. 13

### NEEDLE THREAD TAKE-UP WIRE AND FRAME EYELET (FOR ALL STYLES EXCEPT 56300 E,F,G,N,R,U,X,AH and AL)

Set needle thread take-up wire (B, Fig. 14), so that its upper surface is even with the top of the holes in needle bar thread eyelet (C) when needle bar has completed its downward stroke. Lower this setting for a smaller needle thread loop, or raise it for a larger loop. Set needle thread frame eyelet (D) so that the eyelet hole is 3/4 inch (19.0mm) above the attaching screw on all Styles except on Styles 56500 J, 56900 H, J, P and R the eyelet is to be set 5/8 inch (15.9mm) above the attaching screw and on Style 56200 H the eyelet is to be set 1 inch (25.4mm) above the attaching screw.

NOTE: For the above setting on Styles 56300 E,F,G,N,R,U,X,AH and AL, see the following paragraphs.

### THREADING (FOR STYLES 56300 E,F,G,N,R,U,X,AH and AL)

Refer to threading diagram (Fig. 2A) for the manner in which these machines are threaded.

Fig. 14

NEEDLE THREAD TAKE-UP WIRE AND FRAME EYELET  
FOR (STYLES 56300 E,F,G,N,R,U,X,AH and AL)

Fig. 14A

Fig. 15

These machine styles are equipped with additional thread handling and control parts, so the adjusting sequence should be made in the following manner:

With needle bar at the top of its stroke, set needle thread take-up wire (A, Fig. 14A) so its lower extended surface is  $1 \frac{7}{16}$  inch (36.5mm) above centerline of needle lever thread eyelet hole and  $\frac{3}{4}$  inch (19.0mm) across the centerlines of its vertical surfaces (See Fig. 14A).

Fig. 16

Set looper thread guide eyelet (A, Fig. 15) so its left outer surface is  $\frac{3}{4}$  inch (19.0mm) from the left side of looper thread take-up (B), (See Fig. 15).

Adjust looper thread tension with nut (B, Fig. 14A) to a minimum required for controlling the looper thread (light). Set the thread index eyelet (C) at "3" on the adjusting plate (D). Changing the needle thread tension only, with nut (E), balance the stitch so that when 6 inches (152.4mm) of sewn seam are raveled back, the needle thread is approximately as long as the looper thread. A 1 inch (25.4mm) difference in lengths is permissible. NOTE: Use a sample of the material to be sewn. Maintaining this needle thread tension, move thread index eyelet (C) up to toward "L" to obtain a looser seam (longer needle loops) and toward "T" to obtain a tighter seam.

#### FEEDING PRESSER FOOT

Remove the presser spring regulator and presser spring. Adjust long stop screw (A, Fig. 16) in presser bar guide (B) against bed casting as required to ensure a clearance between the guide and top of presser bar bushing (C), yet so that guide is pulled up quickly by lifter lever link (D) when foot treadle is activated. Tighten lock nut (E) on stop screw.

## FEEDING PRESSER FOOT (Continued)

As a preliminary setting, adjust spring regulator nut (A, Fig. 17) on feeding presser foot so the distance from the top of spring (B) to the yoke (C) is  $\frac{5}{8}$  inch (15.9mm), (See Fig. 17). Assemble the feeding presser foot to presser bar. With presser foot resting on throat plate and feed dog down, press down on spring regulator nut (A, Fig. 17) until the marks on presser foot bottom line up with the centerline of needle, while keeping the needle in the center of needle slot, tighten set screw (D) securing presser bar guide to the presser bar, making sure stop screw in presser bar guide is resting on the bed casting.

Replace presser spring and presser spring regulator. Turn presser bar spring regulator screw down until the thread portion is level with the head casting.

NOTE: Any change in the alignment of needle in relationship to the marks on the presser foot bottom probably means that the stop screw of the presser bar guide was not seated against bed casting before locking set screw.

When the presser foot is lifted off the bare throat plate, the foot should move back only slightly, less than  $\frac{1}{64}$  inch (.4mm). The stop screw (E, Fig. 17) on the yoke, which is set at the factory, can be readjusted if necessary, should this dimension become changed.

Fig. 17

## CHECK

Presser foot at back of needle slot should cover most of throat plate land when resting on the bare throat plate.

When the presser foot bottom is raised by material so that the feeding foot spring bottoms, the back of the needle slot should clear the needle. The main presser bar should not lift before the feeding foot spring bottoms.

The purpose of the feeding foot is to make the top and bottom ply of cloth feed the same amount without pulling on the bottom ply. The  $\frac{5}{8}$  inch (15.9mm) setting on the feeding foot spring usually gives a good matching of piles and a strong feeding pull. Reducing this pressure will tend to feed the top ply more. Increasing this pressure will tend to feed the bottom ply more.

## TORQUE REQUIREMENTS

Torque specifications given in this catalog are measured in inch-pounds or centimeter/kilograms. All straps and eccentrics must be tightened to 19-21 in. lbs. (22-24cm/kg) unless otherwise noted. All nuts, bolts, screws, etc., without torque specifications must be secured as tightly as possible, unless otherwise noted. Special torque specifications for connecting rods, links, screws, etc., are shown on parts illustrations.

## SPECIAL INSTRUCTIONS

### NEEDLE LEVER

When adjusting needle lever or replacing related parts, follow instructions in sequence as listed:

Fig. 18

Fig. 19

Fig. 20

1. Install "O" rings (A, Fig. 18) onto needle lever stud (B) and thrust collar (C).
2. With needle lever (D) in machine and positioned properly; insert stud (B) through hole in needle lever until its shoulder contacts the needle lever and the word "UP" on stud is in the upright position. While making sure no binding exists in the needle bar link, secure stud (B) with the front set screw in top of machine bed.
3. Install temper load ring (E) and compression cups (F) onto stud (B), then push ring and cups through opening in machine bed.
4. Install thrust collar (C) onto stud (B) being careful not to damage "O" ring. Compress components together by tightening screw (G) until washer (H) bottoms against stud (B). Secure stud (B) in position using the rear set screw in top of bed.
5. To check temper load ring for proper compression, remove screw (G) from stud (B) and loosen rear set screw in top of bed. Thrust collar (C) should spring out .003 - .007 inch (.08 - .18mm). Compress load ring in reverse order, then tighten rear set screw.
6. With indented "UP" on stud (B) in upright position, install bearing oiler (J) so its hook sets in oil supply hole (K) of stud. When hook and stud are secured in their proper positions, the proper amount of oil will be channeled to stud for lubricating needle lever (D).

### ALIGNING MAINSHAFT TO CRANKSHAFT

As viewed looking down from rear of machine, spot screws (A, Fig. 19) in the couplings must align with the spots in the looper drive crank (B) and set screws (C) must align with the flats on crankshaft (D) and mainshaft (E). Mainshaft must be positioned laterally with .045 inch (1.14mm) clearance between the right side of its head and the bed casting as shown in Fig. 20.

## ALIGNING MAINSHAFT TO CRANKSHAFT (Continued)

Looper drive Crank (B, Fig. 19) must be positioned laterally with 1/32 inch (.8mm) clearance between it and mainshaft (E) as shown in Fig. 19. Once these settings are made, it is very important that the couplings are tightened in the following sequence for best performance.

Tighten spot screws (A) temporarily, to the looper drive crank. Tighten set screws (C) temporarily, to the crankshaft and mainshaft. Torque screws (F) to 19 - 21 in. lbs. (22-24cm/kg). Loosen spot screws (A) and set screws (C). Re-torque screws (F) to 19-21 in. lbs. (22 - 24cm/kg), then, torque screws (A and C) to 19-21 in. lbs. (22 - 24cm/kg).

The oil drip plate (A, Fig. 21) located in the oil reservoir should be positioned with its tip in the recessed cut out in the bed casting, as far to the left as possible without touching. It has elongated mounting holes and can be adjusted by loosening (2) screws (B) in top of the oil reservoir back cover to position as required, retighten screws.

Fig. 21

## ORDERING REPAIR PARTS

### ILLUSTRATIONS

This catalog has been arranged to simplify ordering repair parts. Exploded views of various sections of the mechanism are shown so that the parts may be seen in their actual position in the machine. On the page opposite the illustration will be found a listing of the parts with their part numbers, descriptions and the numbers of pieces required in the particular view being shown.

Numbers in the first column are reference numbers only and merely indicate the position of that part in the illustration. Reference numbers should never be used in ordering parts. Always use the part number listed in the second column.

Component parts of sub-assemblies which can be furnished for repairs are indicated by indenting their descriptions under the description of the main sub-assembly. Example:

9	29105 AK	Looper Drive Lever Crank Assembly, for Styles 56200 L, W, Classes 56300, 56500 and 56900 -----	1
10	22559 A	Bearing Cap Screw, lower -----	2
11	56343 E	Oil Splasher -----	1
12	56343 C	Ball Joint Guide Fork -----	1
13	22587 K	Bearing Cap Screw, upper -----	1

It will be noted in the above example that the eccentric, ball stud and bearing are not listed. The reason is that replacement of these parts individually is not recommended, so the complete sub-assembly should be ordered.

At the back of the book will be found a numerical index of all the parts shown in this book. This will facilitate locating the illustration and description when only the part number is known.

### IDENTIFYING PARTS

Where the construction permits, each part is stamped with its part number. On some of the smaller parts and on those where construction does not permit, an identification letter is stamped in to distinguish the part from similar ones.

Part numbers represent the same part, regardless of catalog in which they appear.

**IMPORTANT! ON ALL ORDERS, PLEASE INCLUDE PART NAME AND STYLE OF MACHINE FOR WHICH PART IS ORDERED.**

### TERMS

Prices are net cash and subject to change without notice. All shipments are forwarded f.o.b. shipping point. Parcel Post shipments are insured unless otherwise directed. A charge is made to cover postage and insurance.

Before this machine left the factory it was adjusted and inspected to give you the utmost satisfaction and durability at all times. If, however, the machine has been readjusted and is not sewing properly, see chart below for suggestions which may prove beneficial to you.

SKIPPED STITCHES

Condition	Causes	Cures
Needle loop too small	Take-up wire set too low	Raise take-up wire slightly
	Needle thread stretched at bottom of stroke, loop not formed till stretch relieved	Lower frame thread eyelet and/or reduce needle tension
	Needle thread creased because it is too tight and needle is hot	Use oversize ball eye needle, lower frame needle eyelet, reduce tension
	Needle thread pinched by needle guard, collapsing needle loop	Drop needle guard slightly
	Thread twisting around needle	Keep needle loop as small as possible, keep needle thread tension to a minimum. Use a left twist thread
	Needle thread sticking in needle grooves, due to heat	Use oversize ball eye needle, to reduce friction
	Length of needle eye too long, causing delay in needle loop formation	Use needle with shorter eye, drop needle bar slightly or increase looper gauge 1/64 to 1/32 inch
	Needle does not rise enough to form needle loop properly	Increase looper gauge 1/64 to 1/32 inch
Looper misses needle loop as presser foot is coming off a seam	Material is not held down in front of seam and is flagging	Use tractor type presser foot, if available, or see if presser bar is sticking
	Needle deflecting toward operator	Use sharp point needle
Needle loop formed properly but brushed out of the way by looper	Needle bar set too high	Lower needle bar slightly
Looper misses needle loop when operator is trying to match seams or ends of garments	Needle deflecting toward operator who may be holding back on material while matching seams or ends of garment	Do not hold back excessively on material. Properly adjust feed and maintain a light presser foot pressure so operator does not hold back
Machine misses needle loop when stitch length is increased	Needle deflecting toward the operator because the needle guard is set too far forward	Move needle guard to the rear
Needle misses triangle on looper thread side	Looper thread too loose, not making a good triangle	Increase looper thread tension
	Needle being deflected to the rear by burr on needle point or due to operator pulling on material, or needle glancing off when coming on a seam	Do not pull material at the back. Use a sharp needle to stop needle from glancing off seam. Check needle for burr

NOTE: More detailed information concerning the double locked stitch (stitch type 401) is available under "Stitch Formation, Type 401".

CLOTH PLATES, CLOTH PLATE COVERS, EDGE GUIDES AND BINDERS

<u>Ref. No.</u>	<u>Part No.</u>	<u>Description</u>	<u>Amt. Req.</u>
1	25	Screw, for edge guide - - - - -	2
2	24	Edge Guide, for Styles 56200 H, S, 56500 A, B, C, U and Class 56300 except 56300 H, M - - - - -	1
3	56381-212	Cloth Plate Cover, 3 5/16 inches wide, for Styles 56300 F, R, X, AH - - - - -	1
3A	56381-222	Cloth Plate Cover, 3 15/32 inches wide, for Styles 56200 R, S, 56300 E, G, N, U, W - - - - -	1
3B	56381-207	Cloth Plate Cover, 3 15/64 inches wide, for Styles 56300 H, AL, and Classes 56400, 56500, 56900 except 56400 R, S-48 - - - - -	1
	56381 C-207	Cloth Plate Cover, 3 15/64 inches wide, for Styles 56200 H, K, L, 56300 M - - - - -	1
3C	56381 E-207	Cloth Plate Cover, 3 15/64 inches wide, for Style 56200 W - - - - -	1
3D	56381-187	Cloth Plate Cover, 2 59/64 inches wide, for Styles 56400 R, S-48, 56700 J - - - - -	1
4	51281 AC	Cloth Plate Cover Spring - - - - -	1
5	22845 B	Screw - - - - -	1
6	35772 H	Spring Washer - - - - -	3
7	22760 A	Screw - - - - -	3
8	22839 C	Screw, for cloth plate - - - - -	2
9	22526 C	Screw, for cloth plate - - - - -	3
10	56301	Cloth Plate, for Styles 56200 R,S, 56300 E, F, G, R, W - - - - -	1
10A	56301 A	Cloth Plate, for Styles 56300 N, U, X, AH - - - - -	1
10B	56401	Cloth Plate, for Styles 56200 H, K, L, W, 56300 H, M, AL and Classes 56400, 56500, 56900 except 56400 R, S-48 - - - - -	1
10C	56701	Cloth Plate, for Styles 56400 R, S-48, 56700 J - - - - -	1
11	23438 B	Body Fabric Lead-in Platform, for Styles 56200 L and 56300 M - - - - -	1
12	23437 Y	Binder Swinging Bracket, for Styles 56200 L and 56300 M - - - - -	1
13	90	Screw, for binder - - - - -	2
14	23437 B	Binder Swinging Bracket Support, for Styles 56200 L and 56300 M - - - - -	1
15	23425 T	Clamping Plate, for Styles 56200 L and 56300 M - - - - -	1
16	22585	Screw, for binder swinging bracket support - - - - -	2
17	12957 E	Spring Washer, for binder swinging bracket - - - - -	1
18	22735	Screw, for binder swinging bracket - - - - -	1
19	23215 BG-5/8	English Binder, uses selvage edge binding strip 5/8 inch wide, 5/32 inches capacity for body fabric, finishes 5/16 inch wide, for Styles 56200 L and 56300 M - - - - -	1
	23215 BG-3/4	English Binder, use 3/4 inch strip and finishes 3/8 inch, for Styles 56200 L and 56300 M - - - - -	1
	23215 BG-7/8	English Binder, uses 7/8 inch strip and finishes 7/16 inch, for Styles 56200 L and 56300 M - - - - -	1
20	90	Screw, for binder support - - - - -	2
21	23425 T	Clamping Plate, for Style 56200 K - - - - -	2
22	23322 AC	Binder Support, for Style 56200 K - - - - -	1
23	90	Screw, for binder - - - - -	2
24	23322 AB-3/4	Cut Edge Binder, uses strip cut 3/4 inch wide, finishes 7/32 inch wide, for Style 56200 K - - - - -	1
	23322 AB-7/8	Cut Edge Binder, uses strip cut 7/8 inch wide, finishes 1/4 inch wide, for Style 56200 K - - - - -	1
	23322 AB-1	Cut Edge Binder, uses strip cut 1 inch wide, finishes 9/32 inch wide, for Style 56200 K - - - - -	1
	23322 AB-1 1/8	Cut Edge Binder, uses strip cut 1 1/8 inch wide, finishes 11/32 inch wide, for Style 56200 K - - - - -	1
	23322 AB-1 1/4	Cut Edge Binder, uses strip cut 1 1/4 inch wide, finishes 13/32 inch wide, for Style 56200 K - - - - -	1
25	25 C	Screw, for body fabric lead-in platform - - - - -	2
26	23425 V	Washer Plate, for Style 56200 K - - - - -	1
27	23438 A	Body Fabric Lead-in Platform, for Style 56200 K - - - - -	1
28	90	Screw, for pin tension - - - - -	1
29	23439 A	Pin Tension, for binding on Styles 56200 K, 56200 L and 56300 M - - - - -	1
30	25 TB	Screw, for edge guide - - - - -	1
31	21657 E	Washer, for edge guide - - - - -	1
32	24 S	Edge Guide, for Style 56200 W - - - - -	1

NEEDLE BARS, NEEDLE HOLDERS AND NEEDLE GUARDS

<u>Ref. No.</u>	<u>Part No.</u>	<u>Description</u>	<u>Amt. Req.</u>
1	51217 C	Needle Bar, marked "CU", for Classes 56200, 56300	1
2	56	Needle Clamp Nut, for Classes 56200, 56300	1
3	56325	Needle Guard, for Classes 56200, 56300	1
4	22801	Screw	1
5	51417 C-6	Needle Bar, marked "CV-6", for No. 6 gauge, Style 56400 P	1
-	51417 C-8	Needle Bar, marked "CV-8", for No. 8 gauge, Styles 56400 P, T, W	1
-	51417 C-10	Needle Bar, marked "CV-10", for No. 10 gauge, Styles 56400 P, T, W,	1
-	51417 C-12	Needle Bar, marked "CV-12", for No. 12 gauge, Styles 56400 D, P, T, W	1
-	51417 C-16	Needle Bar, marked "CV-16", for No. 16 gauge, Styles 56400 D, P, T, W	1
-	51417 C-18	Needle Bar, marked "CV-18", for No. 18 gauge, Style 56400 P	1
6	50 J-16	Stop Pin	1
7	98	Screw, for needle	2
8	51418-16	Needle Holder, marked "D-16", for all gauges Styles 56400 D, P, T, W and No. 16 gauge, Style 56500 J	1
9	89	Spot Screw	1
10	56425	Needle Guard, for Class 56400, all gauges	1
11	51417 D	Needle Bar, marked "DE", for Nos. 24, 26, 32, 48 gauges, Styles 56400 R, S, X	1
12	50 J-40	Stop Pin	1
13	51418 K-24	Needle Holder, marked "L-24", for No. 24 gauge, Style 56400 X	1
-	51418 K-26	Needle Holder, marked "L-26", for No. 26 gauge, Style 56400 X	1
14	51418 B-32	Needle Holder, marked "D-32", for No. 32 gauge, Style 56400 S	1
15	51418 D-48	Needle Holder, marked "AC-48", for No. 48 gauge, Styles 56400 R, S	1
16	56517 B-16	Needle Bar, marked "ET", for No. 16 gauge, Style 56500 J	1
17	50 J-16	Stop Pin	1
18	51418-16	Needle Holder, marked "D-16", for No. 16 gauge, Style 56500 J and all gauges Style 56400 D, P, T, W	1
19	56517 B-18	Needle Bar, marked "EU", for No. 18 gauge, Style 56500 J, R	1
20	50 J-16	Stop Pin	1
21	7018 E-5	Needle Holder, marked "G-5", for No. 18 gauge, Styles 56500 J, R	1
22	7040-6	Thread Guide	1
22A	187 B	Screw	1
23	56525	Needle Guard, for Styles 56500 J, R all gauges	1
24	29202 M-1	Needle Bar Assembly, for 7 S.P.I., Styles 56500 B, U	1
-	29202 N-1	Needle Bar Assembly, for 10 S.P.I., Style 56500 C	1
25	56517 D-1	Needle Bar, marked "EK", for 7 S.P.I., Styles 56500 B, U	1
-	56517 E-1	Needle Bar, marked "EL", for 10 S.P.I., Style 56500 C	1
26	50 J-16	Stop Pin	1
27	51518 G-1	Needle Holder, marked "P-1", for 7 S.P.I., Styles 56500 B, U	1
-	51518 C-1	Needle Holder, marked "Q-1", for 10 S.P.I., Style 56500 C	1
28	89	Spot Screw	1
29	88 B	Screw, for needle	1
30	22729	Screw, for needle	1
31	56525 B	Needle Guard, for 7 S.P.I., Styles 56500 B, U	1
-	56525 C	Needle Guard, for 10 S.P.I., Style 56500 C	1
32	29202 L-1	Needle Bar Assembly, for 5 S.P.I., Style 56500 A	1
33	56517 C-1	Needle Bar, marked "ES", for 5 S.P.I., Style 56500 A	1
34	50 J-16	Stop Pin	1
35	56518 C-1	Needle Holder, marked "AS", for 5 S.P.I., Style 56500 A	1
36	89	Spot Screw	1
37	22743	Screw, for needle	1
38	22729	Screw, for needle	1
39	56525 A	Needle Guard, for 5 S.P.I., Style 56500 A	1
40	51717	Needle Bar, marked "AU", for Style 56700 J all gauges	1
41	51718 A-56	Needle Holder, marked "AB-56", for No. 56 gauge, Style 56700 J	1
-	51718 A-64	Needle Holder, marked "AB-64", for 64 gauge, Style 56700 J	1
42	22894 P	Spot Screw	1
43	98	Screw, for needle	2
44	51718 B-64	Needle Stop and Thread Eyelet, for No. 64 gauge	2
-	51718 B-56	Needle Stop and Thread Eyelet, for No. 56 gauge	1
45	22513 B	Screw, for No. 64 gauge	2
-	605 A	Screw, for No. 56 gauge	2
46	56725	Needle Guard, for Style 56700 J all gauges	1
47	56917	Needle Bar, marked "EP-9", for Nos. 8, 9 gauges, Styles 56900 H, J, P, R	1
48	50 J-26	Stop Pin	1
49	35818 N-8	Needle Holder, marked "C-8", for No. 8 gauge, Style 56900 H	1
-	35818 N-9	Needle Holder, marked "C-9", for No. 9 gauge, Styles 56900 H, J, P, R	1
50	22752	Screw, for center needle	1
51	22580	Screw, for needle	2
52	56925	Needle Guard, for Class 56900 all gauges	1
53	51917 A	Needle Bar, marked "DC", for No. 7 gauge, Style 56900 H	1
54	50 J-26	Stop Pin	1
55	51918-7	Needle Holder, marked "E-7", for No. 7 gauge, Style 56900 H	1

LOOPER, LOOPER COLLARS AND LOOPER NEEDLE GUARDS

<u>Ref. No.</u>	<u>Part No.</u>	<u>Description</u>	<u>Amt. Req.</u>
1	51409 C	Looper, for Style 56200 L and Class 56300 except Styles 56300 H, M, AL - - - - -	1
2	51409	Looper, for Styles 56200 K, R - - - - -	1
	51409	Looper, back, for Class 56400 all gauges, Styles 56400 R, S- - - - -	1
3	51408-6	Looper, front, for No. 6 gauge, Style 56400 P - - - - -	1
4	51408-8	Looper, front, for No. 8 gauge, Styles 56400 P, T, W- - - - -	1
5	51408-10	Looper, front, for No. 10 gauge, Styles 56400 P, T, W - - - - -	1

FEED DOGS, THROAT PLATES, PRESSER FEET AND TOP GRIP-FEED DRIVING PARTS

<u>Ref. No.</u>	<u>Part No.</u>	<u>Description</u>	<u>Amt. Req.</u>
1	9205 E	Feed Dog, 16 teeth per inch, for Styles 56300 G, U	1
2	9224 E	Throat Plate, for Styles 56300 G, W	1
3	56305 AL	Feed Dog, 12 teeth per inch, for Style 56300 AL	1
4	56324 AL	Throat Plate, for Style 56300 AL	1
5	51205 R	Feed Dog, 16 teeth per inch, for Style 56200 H	1
6	56224 H	Throat Plate, for Style 56200 H	1
7	51320 M	Presser Foot, for Styles 56200 H, 56300 G, AL	1
8	51330 AJ	Presser Foot Shank	1
9	91	Screw	1
10	187 B	Screw	1
11	1741 B	Chain Cutting Knife	1
12	51330 AH	Yielding Section	1
13	51330 W	Spring	1
14	51330 AG	Presser Foot Bottom	1
15	51334 A	Top Grip Feed Presser Foot Driving Arm, for Styles 56300 N, U, X, AH	1
16	51334 D	Presser Foot Connecting Rod, for Styles 56300 N, U, X, AH	1
17	22758 G	Screw	1
18	22875 J	Screw, for top grip feed presser foot driving arm	2
19	28	Screw	3
20	51334 C	Connecting Rod Flat Spring, for Styles 56300 N, U, X, AH	1
21	22561	Screw	1
22	51330 S	Chain Cutting Knife, for Styles 56300 N, U, X, AH	1
23	56305	Feed Dog, 16 teeth per inch, for Style 56300 X	1
24	51324 K	Throat Plate, for Style 56300 X	1
25	56320	Presser Foot, for Style 56300 X	1
26	51330 Z	Presser Foot Shank	1
27	91	Screw	1
28	1096	Screw	1
29	22561	Screw-	1
30	604	Screw-	1
31	19146 A	Spring	1
32	51330 AB	Presser Foot Yielding Section	1
33	56330 F	Yielding Section	1
34	56330 G	Spring	1
35	56330	Presser Foot Bottom, marked "AG"	1
36	51330 AD	Presser Foot Feeding Section, 16 teeth per inch-	1
37	51330 AE	Feed Section Guide	1
38	22738	Screw	2
39	9205 E	Feed Dog, 16 teeth per inch, for Styles 56300 G, U	1
40	51324 F	Throat Plate, for Styles 56300 N, U-	1
41	56320 U	Presser Foot, for Style 56300 U	1
42	51330 M	Presser Foot Shank	1
43	91	Screw-	1
44	1096	Screw	1
45	22738	Screw	4
46	1594 A	Hinge Pin	1
47	51330 R	Feed Section Guide, right-	1
48	56330 E	Presser Foot Bottom	1
49	51330 N	Presser Foot Feeding Section, 16 teeth per inch	1
50	61430 BT	Spring	1
51	56330 F	Yielding Section	1
52	51330 P	Feed Section Guide, left	1
-	* 87 U	Screw, for connecting rod hinge	2
-	*51330 S	Chain Cutting Knife	1
-	*56334 F	Connecting Rod Hinge	1

\* Not Shown on picture plate, but are components of part Nos. 56320 and 56320 U, Ref. No. 25 and 41 respectively.
