LP9915L LP9915R

INDUSTRIAL SEWING MACHINE

High-Post Bed

Single-Needle

Lockstitch

Compound-Feed

Variable speed control

INSTRUCTION MANUAL

PRECURTIONS BEFORE STARTING OPERATION

1. Safety precautions

- 1) When turning the power on, keep your hands and fingers away from the area around/under the needle and the area around the pulley.
- 2) Power must be turned off when the machine is not used, or when the operator leaves his/his seat.
- 3) The power must be turned off before tilting the machine head, installing or removing the "V" belt, adjusting the machine, or when replacing.
- 4) Avoid placing fingers, hairs bars etc. nears the pulley, "V" belt, bobbin winder pulley, or motor when the machine is operation. Injury could result.
- 5) Do not insert fingers into the thread take-up cover, under/round the needle, or pulley when the machine is in operation.
- 6) If a belt cover, finger guard, and/or eye guard are installed, do not operate the machine without these safety devices.

2. Precaution before Starting Operation

- 1) If the machine's oil pan has an oil sump, never operate the machine before filling it.
- 2) If a drop oiler lubricates the machine, never operate the machine before lubricating.
- 3) When a new sewing machine is first turned on, verify the rotational direction of the pulley with the power on.
(the pulley should rotate counterclockwise when viewed from the pulley.)
- 4) Verify the voltage and (single or three) phase with those given on the motor nameplate.

3. Precaution for Operating Conditions

- 1) Avoid using the machine at abnormally high temperature (35°C or higher) or low temperature (5°C or lower). Otherwise, machine failure may result.
- 2) Avoid using the machine in dusty conditions.
- 3) Avoid using the machine in areas where too much electrical noise, resulted from the high-frequency welder and others, is generated.

11. Relationship between rotating hook motion and take-up lever motion 11
12. Relationship between hook motion and opener motion 12
13. Safety clutch device 13
14. Upper feed adjustment (needle side) 14
15. Outside presser foot and inside presser vertical stroke adjustment 15
16. Adjustment of forward/backward stitch length 15

Specifications 16

PREPARATION FOR OPERATION

CAUTIONS ON USE

1. Oiling (1)

Filling the oil reservoir with oil up to "H" mark.
Oil level should be periodically checked. If oil level is found below "L" level replenish oil to "H" level.

For oil, Use white spindle oil

2. Oiling (2)

When a new sewing machine is used for the first time, or sewing machine left out of use for considerably long time is used again, replenish a suitable amount of oil to the portions indicated by arrow in the below figure.

3. Oiling condition

See dripping of oil through the oil sight hole to check oiling condition during operation.

4. Cautions on operation

- (1) When the power is turned on or off, keep foot away from the pedal.
- (2) It should be noted that the brake might not work when the power is interrupted or power failure occurs during sewing machine operation.
- (3) Since dust in the control box might cause malfunction or control troubles, be sure to keep the control box cover close during operation.
- (4) Do not apply a multimeter to the control circuit for checking; otherwise voltage of multimeter might damage semiconductor components in the circuit.

OPERATION

1. Installation of needles

Note: Before installing the needles, be sure to turn off the power.

2. Winding of bobbin thread **Note: When bobbin thread is wound, keep the presser foot lifted.**

Adjustment:

- | | |
|-------------------------|---|
| Tension of wound thread | Slack winding is recommended for polyester thread and nylon thread. |
| Conically wound thread | Move the thread guide toward smaller diameter of wound thread layer. |
| Length of wound thread | Loosen the thread length adjusting screw to increase length of thread and tighten the screw to decrease length of thread. |

3. Selection of thread

It is recommended to use "S" twist thread in the Left needle (viewed from front), and "Z" twist thread in the right needle.

When discriminate use of needle threads is impossible, use "Z" twist thread in both the needles.

For bobbin thread, "S" twist thread as well as "Z" twist Thread can be used.

4. Threading of needle threads

(1) Pass each needle thread through thread guide A

Note: When thin slippery thread (polyester Thread or filament thread, for example) is used pass the thread through thread guide B as well.

(2) With the take-up lever located at the upper most position, pass each needle thread in the order shown in the following figure.

Note: Pressing the upper thread loosening button shown in the figure below opens the saucer of the upper thread tension adjuster, and the upper thread can easily pulled out.

Needle thread tension releasing button

5. Adjustment of feed (stitch) length and stitch reversing (touch back)

Note: To make feed (stitch) length smaller, depress the feed reverse lever and set the feed length setting dial to a desired position.

6. Balance of thread tension

7. Needle thread tension

- Needle thread tension should be adjusted in reference to bobbin thread tension.
- To adjust needle thread tension, turn each tension adjusting nut.

Needle thread tension can be also adjusted for special fabric and thread by changing intensity and movable range of slack thread adjusting spring.

8. Adjustment of presser foot pressure

Pressure to fabric(s) can be adjusted by turning the pressure adjusting screw.

9. Timing between rotating hook motion and needle motion

- (1) Set feed length (stitch length) to "6" on the feed setting dial.
- (2) When needle is lifted 2.4mm from the lower dead point, as shown in Figure, the following positional relationship should be maintained.

The upper edge of needle eye should be 2.3mm below the hook point.

- The hook point should be located at the center of needle axis.
- Gap between the hook point and the side face of needle should be 0.05mm.

10. Adjustment of feed dog height

Height of feed dog and pressure of presser

Foot should be adjusted for individual fabric(s)

With the following cautions:

- Fabric will be damaged if the feed dog extends too high, or pressure of presser foot is too large.
- Even stitch length cannot be assured if the feed dog is too low or pressure of presser foot is too small.
- Feed dog height should be measured at the point where the needle is at the top position.

For light fabrics	Approx. 0.8mm from Throat plate
For usual fabrics	Approx. 1.0mm from Throat plate
For heavy fabrics	Approx. 1.2mm from Throat plate

Adjustment procedure

- (1) Lean the machine head backward.
- (2) Turn the hand wheel by hand and stop when the feed dog rises to the maximum height.
- (3) Loosen the feed bar set screw.
- (4) Vertically move the feed bar (in the direction indicated by arrow in the figure) to adjust it to adequate height.
- (5) After the adjustment, tighten the feed bar set screw.

The feed dog height is factory-adjusted to 1.2mm

11. Relationship between rotating hook motion and take-up lever motion

when the timing belt (toothed belt) was removed for its replacement, for example, the relationship between rotating hook motion and take-up lever motion should be adjusted as follows:

- (1) Turn the balance wheel and stop when the take-up lever is lifted to its upper dead point.
- (2) Lean the machine head backward and make sure the arrow (timing mark) put on the timing belt is in line with the black line on the boss of lower shaft bearing.
- (3) If the timing mark is not in line with the black line, remove the timing belt and install it again to adjust

12. Relationship between needle motion and feed dog motion

- (1) Set feed length to "0" on the feed setting dial
- (2) Lean the machine head backward.
- (3) Loosen the feed lifting rock shaft crank set Screws A and B
- (4) Set the needle at the lowest position.
- (5) Adjust the distance between presser rod and Vibration prevention rod to 9mm and temporarily tighten the feed lifting rock shaft crank set screws A and B
- (6) Check that the right feed lifting rock shaft crank is connected with the link at right angle, as shown in Figure.
- (7) If the connection is not at right angle, remove the back cover, loosen screw C and move the right link to connect the right feed lifting rock shaft with the link at right angle.
- (8) After the completion of adjustment, fully tighten The screws A, B and C.

At this time make certain that needle can enter the feed dog needle hole at the center of the hole.

13. SAFETY CLUTCH DEVICE:

Safety clutch device is installed to prevent the hook and cog belt from damage in case the thread is caught into the hook when the machine is loaded abnormally during operation.

(1) FUNCTION OF SAFETY CLUTCH.

A. When the safety clutch acts, the cog belt pulley will be unloaded. Then the rotation of hook shaft will stop. The arm shaft only will rotate. Stop the operation of machine.

B. Clean the thread thoroughly which is caught into the hook.

C. Turn the cog belt hub by hand, and check Whether the hook shaft rotates lightly and Properly, place the clutch deice as follows.

(2) HOW TO SET THE SAFETY CLUTCH.

A. While pressing down the push button on the opposite side of bed by left hand, turn the balance wheel slowly by right hand away from you as shown in the figure.

B. The balance wheel will stop by the gear plate, but turn the balance wheel more firmly.

C. Release the push button.

D. As shown in the Figure, the safety clutch device is set.

(3) FORCE APPLIED TO THE SEFETY CLUTCH.

A. The force applied to the safety clutch is the smallest when the white mark of the eccentric pin faces the center of the lower shaft. The force proportionally increases as the white mark faces the outside.

B. To adjust the force slide the timing belt, Loosen the set screw, and turn the eccentric pin.

C. After the adjustment, make sure to fasten the set screw.

14. UPPER FEED ADJUSTMENT (NEEDLE SIDE)

If the uneven feeding occurs according to the fabric, adjust the long hole of the horizontal feed shaft crank (right) to adjust the upper feed length.

(How to adjust)

- (1) Loosen the special bolt.
- (2) Move the special bolt upward to decrease upper feed.
- (3) Move the special bolt downward to increase the upper feed. The upper feed and the lower feed theoretically becomes equal at the reference line on the horizontal feed shaft crank.
- (4) Securely tighten the special bolt after adjustment.

15. Outside presser foot and inside presser vertical stroke adjustment

When fabric with large elasticity is sewn,
Or When thickness of fabric changes, the
vertical Stroke (movable range) of the
press feet should be adjusted as follows:

Adjustment

- (1) Loosen the special bolt.
- (2) The vertical strokes of the presser feet become maximum when the crank rod is moved upward and set.
- (3) The vertical strokes becomes minimum when the nut is moved downward and set.
- (4) After the adjustment, fully tighten the special bolt.

The vertical strokes of the presser feet can be adjusted within a range from 6mm to 2mm.

16. Adjustment

Screwing the pin that connects the link of back-sewing with the crank of back-sewing (down) can adjust the tolerance of between the stitches. Screwing the pin in clockwise can increase the stitch of forward sewing; otherwise, the stitch of back-sewing will be increased.

Model	LP9915L	LP9915R
Specitication		
Position of post-bed	Left	Right
Application	Heavy material	
Max.sewing speed	1600rpm	
Stitch length	0-6mm	
Thread take-up lever stroke	74.5mm	
Needle-bar stroke	36mm	
Presser-foot stroke	15 by foot	8 by hand
Vertical stroke of upper feed	2-6mm	
Needle No.	DP×17 (#23 standard)	
Thread take-up lever	Slide lever	
Stitch adjusting system	Dial	
Lubrication system	Automatic lubrication	
Motor	Clutch motor
