Parts manual

OPERATION INSTRUCTION

1. Brief introduction

TW1-1245 adopts compound feed mechanism with synchronous top, bottom and needle feed and the max amount of alternating presser foot lifter reaches 7 mm, which guarantees the high sewing quality of different materials. Besides, TW1-1245 adopts the large auto-lubricating horizontal rotating hook, 4-link thread take-up lever and timing belt, which assures its lower noise and high speed.

This machine is widely used in manufacturing suitcase, tents, cushions, leather products, clothes bamboo matting, etc.

3. Feed adjustment/reverse stitching(Fig.1)

1. Adjusting the stitch length by turning Nut 1;
2. When backward stitching, push Nut 1 to Mark R as much as possible.

2. Main technical specifications

Applications	Medium & heavy weight materials
Max. Sewing speed	2000s.p.m
Max. Stitch length	8mm
Needle bar stroke	36mm
Needle	DP 35 80~140Nm
Lubrication	By hand(partly)
Motor power	370W

4. Adjusting upper feed stroke(Fig.2)

Open the rear cover 1; loosen the screw 2, and as required, move it up and down.

5. Winding bobbin thread(Fig. 3)

1. Put the bobbin into the bobbin shaft 2;
 2. As Fig 3 shows, draw out the thread and winding clockwise to the bobbin several times;
 3. Before winding, press down the winding shaft 2 and the hook gib 3;
 4. Adjusting the bobbin 1 thread tension by the screw 4;
 5. When the bobbin is full, the bobbin winder will automatically stop.
- If the winding is abnormal, loosen the screw 5, and as required, move the thread guide 6, then tighten the screw 5.

6. Adjusting the bobbin thread tension(Fig. 4)

1. As Fig.4 shows, draw out the bobbin thread;
- ※ When the bobbin thread is drawn out, the bobbin should run as the arrow goes.
2. Adjusting the bobbin thread tension by the screw 1.

7. Threading the needle thread/adjusting the tension of needle thread(Fig. 5)

1. Threading as the Fig 5 shows.
- ※ Pass the thread to the eye of needle from the left side(Fig.arrow)
2. Adjusting the needle thread tension by the screw 1

8. Maintenance

Clean the bobbin clearance	Once a week
Normal oiling	Twice a week
Front parts oiling	Twice a week
Check the hook oil box	Once a week
Clean the rotating hook	Once a week
Upper feed driving eccentric oiling	once a year

※ The above data is due to the normal situation. If the machine is used frequently, the interval of the maintenance should be shortened.

Maintenance for rotating hook(Fig.6)

1. Clean the rotating hook with brush every day, and constant use needs more frequent cleansing.
2. Clean the rotating hook thoroughly every week. As follows:
 - a. Open the slide plate and lift the needle bar to its highest point;
 - b. Take out the bobbin cap and the bobbin;
 - c. Release the hook gib 1; turn over the balance wheel until the Point 2 passes to the groove 5mm; then take out the bobbin case;
 - d. Clean the rotating hook track with paraffin wax;
 - e. When the bobbin case is installed, the horn 5 and needle plate groove must be closely touched; (Fig. Arrow)
- Tighten the hook gib 1, install the bobbin case and close the slide plate.

9. Oiling(Fig. 7)

The machine must be oiled at the mark(arrow) twice a week.

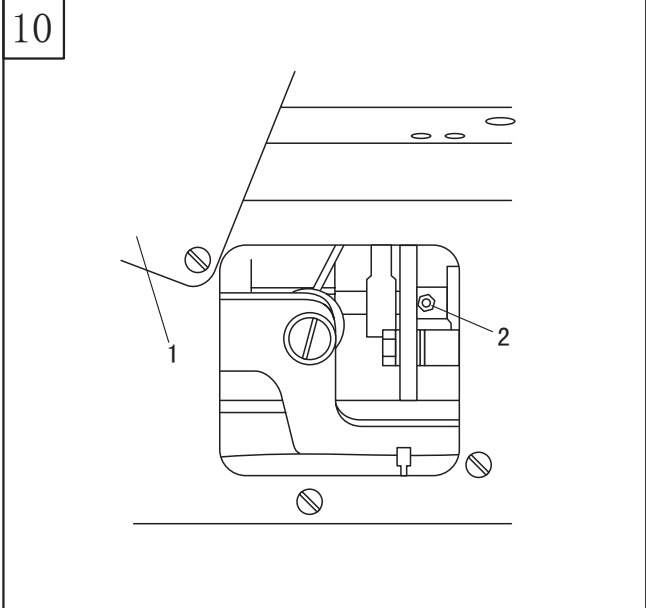

10. Lubricating the hook (Fig. 8)

1. Pull out the knee lever, then lay down the machine head;
2. Fill the oil into box 1 through the hole 2 until the oil level exceeds the highest level mark;
3. Raise the machine.

11. Lubricating the machine head (Fig. 9)

1. Open the face plate;
2. Oil twice a week at all the moving position as the Fig shows;
3. Close the face plate.

12. Lubricating the upper feed driving eccentric (Fig. 10)

1. Open the rear cover 1;
2. Oil the interface (2) at least twice a year; (apply to oil gun)
3. Close the rear cover.

13. Adjusting the feed dog

1. Positioning the feed dog across the direction of sewing (Fig.11);
 - a. Loosen the screw 1 and 2;
 - b. Adjust the shaft 3 as required;
 - c. Tighten the screw 1. (Keep the screw 2 loosening for the following adjustment)

※ The bottom feed dog must be the same distance from the left and right side of the needle plate cutout

2. Positioning the feed dog in the direction of sewing (Fig. 12)
 - a. Set the longest stitch
 - b. Adjust the shaft 1 as required, and tighten the screw 2.

※ With the longest stitch set, the bottom feed dog must have the same clearance the front and the back with respect to the needle plate cutout when feeding both forwards and backwards.

3. Adjusting the height of feed dog (Fig.13)
 - a. Adjust the stitch length to "0" ;
 - b. Turn over the balance wheel until the feed dog reaches its highest position; and as required, adjust the feed dog supporter 1 and the screw 2.

14. Pre-adjusting the needle height (Fig. 14)

Move the needle bar 1 (screw 2) up and down, and as required, adjust it to the right position.

※ When the needle bar is at the lowest position, the clearance between needle bar and needle plate should be 15 mm.

15. Centering the needle in the needle hole (Fig. 15)

1. Loosen the walking foot 1 and the presser foot 2;
2. Adjust the stitch length to “0”, and lift the needle bar to its highest point;

3. Insert the new needle, and loosen the screw 3, 4, 5, 6;

4. Turn the balance wheel and pass the needle directly through the feed dog;

5. As required, move the needle bar frame 7;

6. Tighten screw 3, 4, 5, 6;

7. Move the pin 8 to make it touch the needle bar frame 7, and tighten screw 6.

※ When the stitch length is at the “0”, the needle must enter the needle hole exactly in the middle

16. Adjusting the bottom feed dog position (Fig. 16)

1. Adjust the needle bar to the lowest position;

2. Turn the eccentric wheel 1 (screw 2), and adjust the bottom feed dog to the highest position;

3. Tighten screw 2 to make the eccentric wheel 1 unable to turn;

4. Set the stitch length to the max and turn the eccentric wheel 1 a bit in accordance with requirement 2

5. Tighten screw (2).

※ a. When the needle bar is at its lowest position, the bottom feed dog should be at the highest position;

※ Set the stitch length to its max; turn the balance wheel, and when the bottom feed dog and the needle plate are in the same horizontal level, the point of the needle should be right reaching the surface of the needle plate.

17. Adjusting the upper and the lower feed (Fig.17)

1. Adjust the stitch length to the max;
2. Loosen screw 1 to make the feed eccentric wheel 2 turn around the shaft;
3. Adjust the needle bar to the lowest position;
4. Turn the eccentric wheel 2 so that its eccentricity is facing downwards.
5. As required, turn the eccentric wheel a bit as it turns and tighten screw 1;
6. Check it as required.

※ When the stitch length is at the max, the needle bar is at the lowest position, if the reverse feed lever is activated, there will be no feeding.

18. Position of needle and rotating hook (Fig.18)

1. Adjust the stitch length to “3”, and loosen screw 1,2;
2. The clearance between needle and the hook point should be adjusted to 0.05-0.1 mm by moving the hook gear 4;
3. Tighten screw 1;
4. Turn the needle to the lowest position, and continue to turn the hand wheel to raise 2 mm of the needle;
5. Make the hook point aim at the center of the needle and be sure the guard plate 7 doesn't press on the needle;
6. Leave some gear clearance and tighten screw 2;
7. The vertical clearance between the top of needle eye and the hook point should be 0.8-1 mm by adjusting the needle height;
8. The guard plate 8 might be adjusted to touch the needle lightly.

※ When the stitch length is adjusted to “3” and the needle is lifted 2 mm from the lowest position, the following requirements must be reached:

- a. The clearance between needle and hook point is 0.05-1mm;
- b. The vertical clearance between the top of needle eye and hook point is 0.8-1mm;
- c. The guard plate must touch the needle lightly.

19. Adjusting the lifting amount of alternating presser foot (Fig.19)

1. The stitch length is adjusted to “0”, and the lifting amount of alternating presser foot is adjusted to the max;
2. Lower the presser foot 1 on the needle plate;
3. Turn the hand wheel until the walking foot 2 reaches the highest position;
4. As required, move the crank 3 (screw 4);
5. Check as required.

※ When the stitch length is at the “0” and the lifting amount of alternating presser foot is at the max, turn the hand wheel to make sure the clearance between presser foot 1/walking foot 2 and needle plate is 7mm .

20. Top feed adjustment (Fig. 20)

1. Lower the presser foot on the needle plate;
 2. Loosen screw 2 until the feed lifting eccentric wheel 3 can turn reluctantly;
 3. Adjust the eccentric wheel 3 as required;
 4. Tighten screw 2;
 5. Check as required.
- ※ When presser foot is resting on the needle plate, the walking foot and the point of needle must both reach the needle plate at the same time when the top feed stroke is set at maximum.

21. Adjusting the bobbin case opener

1. Thread the machine; lay down the material; then lower the presser foot;
 2. Turn the hand wheel and sew a bit, then check as required.
 3. Move the opener 1 (screw 2) as required
- ※ The needle thread must not be clamped when passing through the mark 1,3,4

22. Safety clutch (Fig. 22)

1. When the rotating hook jams the thread, the safety clutch will be off to prevent the hook being damaged
 2. Take out the jammed thread;
- ※ Press the piston 1 and turn the hand wheel until hook 3 of pawl 2 clicks into groove 4

23. Needle thread tension release (Fig. 23)

When the presser foot is lifted, the clearance between the two tension discs should be 0.5mm (0.5mm is the minimum. When applied to thick thread, it could be adjusted to 1 mm or more). Adjust the plate 1 as required.

24. Bobbin thread winder (Fig. 24)

1. When the winder switch on, its spindle must engage reliable; when the winder switch off, the friction wheel 5 and the driving gear 1 should get apart;

2. When the thread level is approx. 1mm from the edge of the bobbin, the winder will switch off automatically;

※ When operating, set the bobbin on the winder, threading the bobbin thread and switch the winder On, adjust the pin 3 and screw 4 as requirements if need.

PARTS MANUAL
